_X__ Project QAPP/SAP

Total Organic Carbon

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SS0809C
Test Name: TOC
Method No.: Walkley Black

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do sample preservation, collection and storage condition meet method requirement? (4C and <2)	X		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times (28 days), determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-).		X	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are two standards included in the calibration curve run with four injections each? If no, flag "R".			
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".			
4.3	Were continuing calibration standards analyzed every 10 samples? If no, flag "R".			
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±10%) or %D(≤10%) within the			
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>10%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 10%, J(+), only. Negative Bias - %D>-10% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes: N/A, this is a titration

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.		X	

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			X
6.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
6.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes: Laboratory only conducts sample duplicates

7.0 Field Duplicate		Yes	No	NA
7.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended should be noted during data validation and discussed in the DV report.			X

Notes:

8.0 Compound Identification and Detection Limit Verification		Yes	No	NA
8.1	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

9.0 Data Completeness		Yes	No	NA
9.1	Is % completeness for certainty? (Control limit 90%)	X		
9.1.1	Number of samples: 2			
9.1.2	Number of target compounds in each analysis: 1			
9.1.3	Number of results that are uncertain at comparison criteria standard: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

THIS IS THE LAST PAGE OF THE REPORT.

SDG CASE NARRATIVE

URS Corporation
RFAAP SSP at Six Sites

SDG Executive Summary

This case narrative applies to samples received on August 14, 2009. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between URS Corporation and TriMatrix Laboratories, Inc..

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations and reporting conventions are included in Attachment 1 - *Project Technical Narrative*.

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications*. The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Conference (NELAC). Estimates of analytical uncertainties for the test results contained within the report are available upon request.

Lisa M. Harvey, Project Chemist

SDG CASE NARRATIVE

Sample Receipt and Login -- Work Order: 0908257

TriMatrix Laboratories received the cooler(s) for this work order on August 14, 2009, at 09:00am. Receiving documents include field chain-of-custody (COC) record(s), sample receipt form(s), and FedEx shipping document(s). The condition of the custody seals, the type and location of the coolant, and the temperatures recorded for each cooler are presented on the TriMatrix *Sample Receiving / Log-In Checklist* provided in section A of this package. The receipt temperature of the samples was determined by using an infrared thermometer to record the temperature of three random samples of varying container types and the accompanying temperature blank, if present.

Samples were scheduled for the analyses listed on the corresponding COC form. Field IDs and assigned laboratory identifiers are presented in the table below.

Field Sample Name	Laboratory Sample ID	Matrix	Date Sampled
30SS1	0908257-01	Soil	8/13/2009
30SB1B	0908257-02	Soil	8/13/2009
DUP-4	0908257-03	Soil	8/13/2009
30SS2	0908257-04	Soil	8/13/2009
30SS3	0908257-05	Soil	8/13/2009
30SB2B	0908257-06	Soil	8/13/2009

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. For cases in which the analyte is not listed in the QSM, internal laboratory control limits were used.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Methods 6010B and 6020A

The acceptance criterion of < 2 x RL is substituted for < 2 x MDL for interference check solution ICS-A.

Project Correspondence

Any additional correspondence with the Client, and potentially any third parties also involved in the project, regarding sample receipt and/or analysis follows.

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Volatile Organic Compounds by EPA Method 8260B

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8260B

Sample/Analyte:	
0908257-05 30SS3	1,1,2-Trichloro-1,2,2-trifluoroethane
0908257-05 30SS3	1,2,3-Trichlorobenzene
0908257-05 30SS3	1,2,4-Trichlorobenzene
0908257-05 30SS3	cis-1,3-Dichloropropene
0908257-05 30SS3	Methylcyclohexane

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-8260B

Sample/Analyte:	
0908257-05 30SS3	1,2-Dichlorobenzene
0908257-05 30SS3	trans-1,3-Dichloropropene

Qualification: The associated Internal Standard response was less than the lower control limit but greater than or equal to 30%. Reanalysis confirmed the response; sample matrix interference is evident. The result is considered estimated.

Analysis: USEPA-8260B

Sample/Analyte:	
0908257-10 79SS2	1,1,2,2-Tetrachloroethane
0908257-10 79SS2	1,2,3-Trichlorobenzene
0908257-10 79SS2	1,2,4-Trichlorobenzene
0908257-10 79SS2	1,2-Dibromo-3-chloropropane
0908257-10 79SS2	1,2-Dichlorobenzene
0908257-10 79SS2	1,3-Dichlorobenzene
0908257-10 79SS2	1,4-Dichlorobenzene
0908257-10 79SS2	Isopropylbenzene
0908257-14 60SS6	1,1,2,2-Tetrachloroethane
0908257-14 60SS6	1,2,3-Trichlorobenzene
0908257-14 60SS6	1,2,4-Trichlorobenzene
0908257-14 60SS6	1,2-Dibromo-3-chloropropane

5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7465

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Volatile Organic Compounds by EPA Method 8260B

Sample/Analyte:	0908257-14 60SS6	1,2-Dichlorobenzene
	0908257-14 60SS6	1,3-Dichlorobenzene
	0908257-14 60SS6	1,4-Dichlorobenzene
	0908257-14 60SS6	Isopropylbenzene

Qualification: Concentration exceeds calibration range

Analysis: USEPA-8260B

Sample/Analyte: 0908257-04 30SS2 Acetone

Qualification: One or more surrogate recoveries for the sample were less than the lower control limit but greater than or equal to 10%. All results are considered estimated.

Analysis: USEPA-8260B

Sample/Analyte: 0908257-14 60SS6

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: The LCS recovery exceeded the control limit but it was within the marginal exceedance for a compound that is not a project-specific analyte of concern. The result for this analyte in any sample from the associated QC batch is not considered qualified.

Analysis: USEPA-8270C

Sample/Analyte:	
0908257-01 30SS1	4-Methylphenol
0908257-02 30SB1B	4-Methylphenol
0908257-03 DUP-4	4-Methylphenol
0908257-04 30SS2	4-Methylphenol
0908257-06 30SB2B	4-Methylphenol
0908257-07 79SS1	4-Methylphenol
0908257-08 30SB3B	4-Methylphenol
0908257-09 DUP-5	4-Methylphenol
0908257-10 79SS2	4-Methylphenol

Qualification: The LCS recovery was outside of the control limit with no allowed marginal exceedences. The result for this analyte in any sample from the associated QC batch is considered qualified.

Analysis: USEPA-8270C

Sample/Analyte:	
0908257-01 30SS1	Benzaldehyde
0908257-01 30SS1	Carbazole
0908257-01 30SS1	Di-n-butyl Phthalate
0908257-02 30SB1B	Benzaldehyde
0908257-02 30SB1B	Carbazole
0908257-02 30SB1B	Di-n-butyl Phthalate
0908257-03 DUP-4	Benzaldehyde
0908257-03 DUP-4	Carbazole

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Sample/Analyte:	0908257-15 EQBK-3	Caprolactam
	0908257-15 EQBK-3	Carbazole
	0908257-15 EQBK-3	Chrysene
	0908257-15 EQBK-3	Dibenzofuran
	0908257-15 EQBK-3	Diethyl Phthalate
	0908257-15 EQBK-3	Di-n-butyl Phthalate
	0908257-15 EQBK-3	Fluoranthene
	0908257-15 EQBK-3	Fluorene
	0908257-15 EQBK-3	Hexachlorobenzene
	0908257-15 EQBK-3	Hexachloroethane
	0908257-15 EQBK-3	Naphthalene
	0908257-15 EQBK-3	Pentachlorophenol
	0908257-15 EQBK-3	Phenanthrene

Qualification: The analyte concentration in the MB for this common lab contaminant was greater than 1/2 the RL, but less than the RL. The positive sample result, which was less than 5 times the MB value, is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	0908257-01 30SS1	Di-n-butyl Phthalate
	0908257-04 30SS2	Di-n-butyl Phthalate
	0908257-07 79SS1	Di-n-butyl Phthalate
	0908257-09 DUP-5	Di-n-butyl Phthalate
	0908257-10 79SS2	Di-n-butyl Phthalate

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	0908257-05 30SS3	Atrazine
	0908257-05 30SS3	Caprolactam

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	0908257-05 30SS3	3,3´-Dichlorobenzidine

5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7465

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: The MS and/or MSD recovery was less than 10%. A positive result for this analyte in the unspiked sample is considered estimated; a non-detect result for the same analyte is considered unusable.

Analysis: USEPA-8270C

Sample/Analyte: 0908257-05 30SS3 Benzaldehyde

Qualification: 3-Methylphenol cannot be resolved from 4-Methylphenol due to chromatographic limitations. The reported result could be 3-Methylphenol, 4-Methylphenol, or a combination of both isomers.

Analysis: USEPA-8270C

Sample/Analyte: 0908257-04 30SS2 4-Methylphenol

5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7463

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Nitroaromatics & Nitramines by EPA Method 8330

Qualification: Manual integration was performed on this sample for the analyte(s) listed below in accordance with the TriMatrix Manual Integration SOP. All necessary documentation, including the signed review, is included in the raw data section of the data package.

Analysis: USEPA-8330

Sample/Analyte:	
9F26032-CAL1	4-Nitroaniline
9F26032-CAL1	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)
9F26032-CAL2	4-Nitroaniline
9F26032-CAL2	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)
9F26032-SCV1	4-Nitroaniline
9F26032-SCV1	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)

5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7485

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Total Metals by EPA 6000/7000 Series Methods

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:	
0908257-05 30SS3	Barium
0908257-05 30SS3	Zinc

Analysis: USEPA-6020A

Sample/Analyte:	
0908257-05 30SS3	Lead

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-6020A

Sample/Analyte:	
0908257-05 30SS3	Vanadium

Qualification: This analyte was not present in this sample at a concentration greater than 50 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6010B

Sample/Analyte:	
0908257-05 30SS3	Aluminum

Qualification: This analyte was not present in this sample at a concentration greater than 100 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6020A

Sample/Analyte:	
0908257-05 30SS3	Antimony
0908257-05 30SS3	Thallium

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was greater than or equal to 4 times the spiked amount; the non-spiked sample result is not qualified.

Analysis: USEPA-6010B

Sample/Analyte:	
0908257-05 30SS3	Aluminum
0908257-05 30SS3	Iron
0908257-05 30SS3	Manganese

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5:	NaOH
500	2.5
1000	5.0

City — State — ZIP

8617 5417 6798

4a Express Package Service — *Packages up to 150 lbs.*

- FedEx Priority Overnight — Next business morning.* Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate.

* To most locations.

4b Express Freight Service — *Packages over 150 lbs.*

- FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation.

** To most locations.

5 Packaging

- FedEx Envelope*
- FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- FedEx Box
- FedEx Tube
- Other

* Declared value limit $500.

6 Special Handling — Include FedEx Address in Section 3

- SATURDAY Delivery — Not available for FedEx Standard Overnight, FedEx First Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- HOLD Weekday at FedEx Location — Not available for FedEx First Overnight.
- HOLD Saturday at FedEx Location — Available ONLY for FedEx Priority Overnight and FedEx 2Day to select locations.

Does this shipment contain dangerous goods? One box must be checked.

- No
- Yes — As per attached Shipper's Declaration.
- Yes — Shipper's Declaration not required.
- Dry Ice — Dry Ice, 9, UN 1845 ____ x ____ kg
- Cargo Aircraft Only

Dangerous goods (including dry ice) cannot be shipped in FedEx packaging.

TriMatrixCOC -- COC WHITE COPY - REPORT YELLOW COPY - LABORATORY PINK COPY - FIELD

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a “Reason Code”. The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	b	Laboratory duplicate imprecision
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	c	Calibration failure
d	MS/MSD imprecision	d	MS/MSD imprecision	d	MS/MSD imprecision
e	LCSD imprecision	e	LCSD imprecision	e	LCSD imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	f	Field duplicate imprecision
g	Tuning failure or poor mass spec performance	g	Dual column confirmation imprecision	g	Duel isotope imprecision
h	Holding time violation	h	Holding time violation	h	Holding time violation
i	Internal standard failure	i	Internal standard failure	j	Vial Headspace
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits
l	LCS recovery failure	l	LCS recovery failure	l	LCS recovery failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	m	MS/MSD recovery failure
p	Poor chromatography	p	Poor chromatography	n	ICS failure
q	Concentration exceeded the linear range	q	Concentration exceeded the linear range	o	Calibration blank contamination
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	p	Preparation blank contamination
s	Surrogate failure	s	Surrogate failure	q	Concentration exceeded the linear range
t	TIC	u	No confirmation column	r	Linearity failure in calibration or MSA
w	Identification criteria failure	w	Retention time failure	s	Serial dilution failure
x	Field blank contamination	x	Field blank contamination	u	BOD minimum depletion did not exceed 2mg/L
y	Trip blank contamination	z	Method blank contamination	v	Post-digestion spike failure
z	Method blank contamination			w	CRDL Standard Failure
				x	Field blank contamination

DATA VALIDATION REPORT - Level M3 Review

SDG No.:	**G296-641**	**Fraction:**	**Dioxin / Furan**
Laboratory:	**SGS**	**Project:**	**Radford SSP SSA 77**
Reviewer:	**Andrea Sansom**	**Date:**	**October 7, 2009**

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied, data review worksheets, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the referenced analytical methods and laboratory generated control limits; and, qualified according to the protocols defined in *USEPA, Region III, Dioxin / Furan Data Validation Guidance (March 1999)*.

Major Anomalies: None.

Minor Anomalies: The following detections are less than the lower calibration level:

Sample	Analyte	Result (pg/g)
77SB3A	1,2,3,7,8,9-HxCDF	5.06
DUP-2	1,2,3,4,7,8,9-HpCDF	7.76
	1,2,3,4,7,8-HxCDD	7.43
	1,2,3,7,8,9-HxCDF	4.93
	1,2,3,7,8-PeCDD	8.08
	1,2,3,7,8-PeCDF	6.1
	2,3,4,7,8-PeCDF	11.3
	2,3,7,8-TCDD	1.52

These results were flagged J,q, unless subsequently flagged B for method blank detections. The OCDD result was calculated from a concentration that exceeded the linear range of the initial calibration for field sample 77SB2A. This result should be considered estimate and was flagged J,q. The method blank for batch WG17269 displayed the following detections:

Analyte	Result (pg/g)	EMPC (pg/g)
2,3,7,8-TCDD	0.482	
1,2,3,4,6,7,8-HpCDD	0.318	
OCDD	2.07	
2,3,7,8-TCDF	0.268	
OCDF	EMPC	0.444

The associated field sample results less than five times the blank concentrations were flagged B,z. The matrix spike duplicate pair performed on field sample 77SB2A displayed the following percent recoveries less than the lower control limit of 70% and relative percent differences (RPD) greater than the control limit of 20%:

Analyte	Matrix Spike (%)	Matrix Spike Duplicate (%)	RPD
1,2,3,6,7,8-HxCDD	**69.4**	91.8	18.7
2,3,7,8-TCDF	**31.3**	**54.4**	13.8
2,3,4,7,8-PeCDF	**68.7**	85.0	17.1
1,2,3,4,7,8-HxCDF	**68.3**	82.1	12.7
1,2,3,6,7,8-HxCDF	**66.0**	81.7	14.9
2,3,4,6,7,8-HxCDF	**59.8**	79.5	16.1
1,2,3,7,8,9-HxCDF	**49.8**	94.1	**51.4**

The parent sample result for 2,3,7,8-TCDF was positive and was flagged L,m. The parent sample for 1,2,3,7,8,9-HxCDF was positive was flagged J,d. The field duplicate pair (77SB3A/DUP-2) displayed a relative percent difference greater than the control limit of 50% for Total TCDD at 57%. Both sample results were positive and were flagged J,f.

Correctable Anomalies: The laboratory used the average of the average response factors from the initial calibration for Total HxCDD, PeCDF, HxCDF, and HpCDF instead of the lowest average response factor of the calibrated isomers. Total results for each congener group include concentrations reported for the 17 target analytes. EMPC were only reported as present in the Total Homologues. Individual peaks included in the EMPC concentrations reported may be within the EPA Region III expanded ion ratio.

Comments: The case narrative explains that field sample DUP-2 was re-extracted and reported from a dilution factor of two due to matrix interference. On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of anomalies discussed above. All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: Andrea Sansom
Date: 10/7/2009
DV Level: II III IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG Region III Draft Guidance (March 1

Project Name: Radford SSP SSA77
Project Number: 11657490.40000
Laboratory: SGS
SDG No.: G296-641
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	X		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	X		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	X		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			X

Notes:

4.0 Instrument Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	X		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	X		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	X		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.	X		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	X		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.20
8	M+2	0.89	0.76- 1.02

4.6	Was the CCV analyzed at the beginning and end of every 12 hours of each analytical sequence? If no, J(+)/UJ(-) all associated samples.	X		

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start and end of each max 12 hour analytical sequence? If no, apply "R".	X		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	X		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	X		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	X		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	X		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?	X		
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

7.0 Laboratory Control Sample (LCS/LCSD) [aka Ongoing Precision Result (OPR/OPRD)		Yes	No	NA
7.1	Is the LCS recovery form present?	X		
7.2	Was an LCS analyzed for each batch?	X		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		X	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Internal Standards and Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	X		
8.2	Is the signal to noise $\geq$ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	X		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	X		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.		X	
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.		X	
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	X		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	X		
10.4	Is the signal to noise $\geq$ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	X		
10.5	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	X		
10.6	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within $\pm$ 2 seconds? If yes, qualify positive furan results I.		X	
10.7	Was a second column confirmation used for positive 2,3,7,8-TCDF?	X		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.8	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	X		
10.9	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.	X		

Notes:

11.0 Ion abundance criteria and EMPC		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	X		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	No		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	X		
12.1.1	Number of samples: 3			
12.1.2	Number of target compounds in each analysis: 27			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Dear Ms. Devine:

Enclosed is a full data package containing the final results for samples received by SGS Environmental Services, Inc. on August 12, 2009 under your project name "RFAAP SSP 6 Sites". The samples were analyzed by Method 8290 following SGS's Standard Operating Procedures and are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards.

Number of Samples Received:	5
Your Project Reference:	RFAAP SSP 6 Sites
PAL Project Number:	G296-641

We appreciate your business and look forward to working with you again. Please contact me at 910-350-1903 if you have questions or need additional technical support.

Sincerely,

Lori Lockamy
Project Manager

SGS

Case Narrative
SGS Project: **G296-641**
Project Name: **RFAAP SSP 6Sites**

For Method: 8290

- The submitted samples were accepted into the lab on August 12th, 2009 and extracted on August 30th and September 9th, 2009 by method 3540C. The sample extracts and associated QC extracts were then processed through clean-up as prescribed in the SGS standard operating procedures and analyzed by HRGC/HRMS for method 8290.

- Sample **DUP-2** was re-extracted at a lesser volume of 5.00g due to matrix interferences.

9-11-09

Tamara Morgan Date
Data Validation

SGS

List of Qualifiers: Dioxin's

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

RL Report Limit

CL Control Limit

U Undetected

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* Indicates that the ion-ratio fails high or low; analyte reported as an EMPC

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Method Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

O The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	b	Laboratory duplicate imprecision
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	c	Calibration failure
d	MS/MSD imprecision	d	MS/MSD imprecision	d	MS/MSD imprecision
e	LCSD imprecision	e	LCSD imprecision	e	LCSD imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	f	Field duplicate imprecision
g	Tuning failure or poor mass spec performance	g	Dual column confirmation imprecision	g	Duel isotope imprecision
h	Holding time violation	h	Holding time violation	h	Holding time violation
i	Internal standard failure	i	Internal standard failure	j	Vial Headspace
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits
l	LCS recovery failure	l	LCS recovery failure	l	LCS recovery failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	m	MS/MSD recovery failure
p	Poor chromatography	p	Poor chromatography	n	ICS failure
q	Concentration exceeded the linear range	q	Concentration exceeded the linear range	o	Calibration blank contamination
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	p	Preparation blank contamination
s	Surrogate failure	s	Surrogate failure	q	Concentration exceeded the linear range
t	TIC	u	No confirmation column	r	Linearity failure in calibration or MSA
w	Identification criteria failure	w	Retention time failure	s	Serial dilution failure
x	Field blank contamination	x	Field blank contamination	u	BOD minimum depletion did not exceed 2mg/L
y	Trip blank contamination	z	Method blank contamination	v	Post-digestion spike failure
z	Method blank contamination			w	CRDL Standard Failure
				x	Field blank contamination

DATA VALIDATION REPORT - Level III Review

SDG No.:	**SSP1109**	**Fraction:**	**VOC, SVOC, Pesticides, PCB, Explosives, TAL Inorganics, & TOC**
Laboratory:	**TriMatrix**	**Project:**	**Radford SSP**
Reviewer:	**Andrea Sansom**	**Date:**	**December 28, 2009**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: The volatile organic compound (VOC) laboratory control spikes displayed the following anomalies:

Batch	Analyte	Laboratory Control Spike (%)	Control Limits (%)
0914281-BS1	Methylene chloride	**145**	55-140
	1,1,2-Trichloro-1,2,2-trifluoroethane	**72**	80-120
0914281-BS2	Methylene chloride	**166**	55-140

The associated field sample results were non-detect for 1,1,2-trichloro-1,2,2-trifluoroethane and were flagged R,l. The associated field sample results were non-detect for methylene chloride while the laboratory control spikes displayed a positive bias; therefore, no further data qualifying action was taken. The semi-volatile organic compound (SVOC) matrix spike pair performed on field sample 79SS4 displayed the following anomalies:

Analyte	Matrix Spike (%)	Matrix Spike Duplicate (%)	Control Limits	Relative Percent Difference (%)	Control Limit
Caprolactam	**58**	62	62-112	6	30
3,3'-Dichlorobenzidine	**5**	**5**	10-130	8	
3-Nitroaniline	**12**	**18**	25-110	**36**	
4-Chloroaniline	**2**	**2**	10-95	19	
4-Methylphenol	**108**	101	40-105	7	
4-Nitroaniline	**28**	35	35-115	22	

The associated parent sample results were non-detect. The parent sample results for 3,3'-dichlorobenzidine and 4-chloroaniline were flagged R,m. The parent sample results for caprolactam, 3-nitroaniline, and 4-nitroaniline were flagged UL,m.

Minor Anomalies: For the VOC analyses, blanks displayed the following positive detections:

Type	Identification	Analyte	Result	Units
Batch Blank	0914281-BLK1	Methylene Chloride	4.2	µg/kg
	0914281-BLK2	Acetone	5.0	

The associated field sample results were non-detect, thus, no data qualifying action was required. The second source verification for initial calibration 9K25008 displayed a percent recovery greater than the upper control limit of 120% for methylene chloride at 133%. Since the associated field sample results were non-detect, no data qualifying action was taken. The continuing calibration analyzed on 11/23/09 at 0740 displayed percent differences greater than the control limit of 20%:

Analyte	%D	Bias
Bromochloromethane	21.1	+
Dichlorodifluoromethane	27.0	-
Methylene chloride	44.8	+
1,1,2-Trichloro-1,2,2-trifluoroethane	27.8	-

Since the associated field sample results were non-detect for bromochloromethane and methylene chloride while the continuing calibration displayed a positive bias, no data qualifying action was taken. The associated field sample results were non-detect for dichlorodifluoromethane and 1,1,2-trichloro-1,2,2-trifluoroethane and were flagged UJ,c, unless previously flagged for a laboratory control spike anomaly. The matrix spike pair performed on field sample 79SS4 displayed the following anomalies:

Analyte	Matrix Spike (%)	Matrix Spike Duplicate (%)	Control Limits (%)	Relative Percent Difference	Control Limit (%)
1,1,2-Trichloro-1,2,2-trifluoroethane	82	**73**	80-120	10	30
Carbon disulfide	120	72	45-160	**50**	
Methyl acetate	120	87	70-130	**32**	

The associated parent sample results were non-detect. The associated field sample results were previously qualified for a similar laboratory control spike anomaly and no further data qualifying action was taken.

For the SVOC analyses, the field duplicate pair performed on 79SS5 displayed the following precision greater than the control limit of 60% when both field sample results were positive or else a difference greater than twice the reporting limit:

Analyte	RL	Sample Conc		Duplicate Conc		%RPD	Delta	2xRL
Acenaphthene	21	60		1.7	J	189.0%	**58.3**	42
Anthracene	21	62		22	U	**95.2%**	40	42
Benzo(a)anthracene	21	230		17	J	172.5%	**213**	42
Benzo(a)pyrene	21	110		20	J	138.5%	**90**	42
Benzo(b)fluoranthene	21	190		21	J	160.2%	**169**	42
Benzo(k)fluoranthene	21	110		16	J	149.2%	**94**	42
Chrysene	21	170		20	J	157.9%	**150**	42
Fluoranthene	21	440		34		**171.3%**	406	42
Phenanthrene	21	550		26		**181.9%**	524	42
Pyrene	21	460		34		**172.5%**	426	42

Positive field duplicate results were flagged J,f.

For the pesticide analyses, the continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Column	Analyte	Percent Difference	Bias
12/02/09	0012	1	delta-BHC	15.5	-
			4,4'-DDD	19.4	
			4,4'-DDE	18.7	
			Methoxychlor	18.9	
		2	alpha-Chlordane	17.4	
			beta-BHC	16.0	
			delta-BHC	19.7	
			Dieldrin	16.7	
			Endosulfan I	17.2	
			Endosulfan II	15.8	
			Endosulfan sulfate	16.2	
			Endrin	15.4	
			Endrin aldehyde	15.8	
			Endrin ketone	16.7	
			gamma-Chlordane	16.7	
			Heptachlor	15.6	
			Heptachlor epoxide	16.4	
			Methoxychlor	16.2	
	0321	1	4,4'-DDT	20.0	
			alpha-Chlordane	15.5	
			Dieldrin	16.7	
			Endosulfan I	15.4	
			Endosulfan II	15.5	
			Endosulfan sulfate	17.5	
			Endrin	16.1	
			Endrin aldehyde	19.8	
			Endrin ketone	16.0	
			gamma-Chlordane	15.6	
			Methoxychlor	20.1	
		2	Endosulfan sulfate	15.4	
			Endrin ketone	16.3	
12/04/09	1647	1	Toxaphene	36.7	+
		2		41.7	
12/05/09	0020	1	4,4'-DDT	19.5	
		2	4,4'-DDD	16.6	-
			Endosulfan II	18.5	
			Endrin ketone	15.6	
			Methoxychlor	19.9	
	0057	1	Toxaphene	24.6	+
		2		31.3	

Field sample results were non-detect when both columns displayed a positive bias, thus, no data qualifying action was taken. When both analytical columns displayed a negative bias, the associated field sample results were non-detect and were flagged UJ,c. No data qualifying action was required for non-detect results reported from the passing column when the second analytical column displayed an anomaly of either bias. The matrix spike pair conducted on field sample 79SS4 displayed the following anomalies:

Analyte	Matrix Spike (%)		Matrix Spike Duplicate (%)		Control Limits (%)	Relative Percent Difference	Control Limit (%)
	Column 1	Column 2	Column 1	Column 2		Column 2	
4,4'-DDT	127	121	**150**	97	45-140	21	30
Endrin aldehyde	77	87	92	62	35-145	**32**	
Methoxychlor	122	**167**	118	112	55-145	**39**	

The associated parent sample results were non-detect and no data qualifying action was taken. Field sample 72SB3B displayed a relative percent difference greater than the control limit of 40% between the dual column concentrations for 4,4'-DDE at 58.8%. This result was flagged J,g.

For the PCB analyses, the continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Column	Analyte	Percent Difference	Bias
11/24/09	0253	1	PCB-1254	16.1	-
12/07/09	2044		PCB-1260	16.6	+
	2156			16.9	

Positive associated field sample results were flagged J,c when one of the analytical columns displayed a negative bias. No data qualifying action was required for non-detect results reported from the passing column when the second analytical column displayed an anomaly of either bias.

For the explosives analyses, the following continuing calibrations displayed percent differences greater than the control limit (i.e., 15%):

Date	Time	Analyte	%D	Bias
11/24/09	1913	Tetryl	19.9	-
	2038		20.9	

Since the associated field sample results were non-detect while the continuing calibrations displayed a negative bias, the associated field sample results were flagged UJ,c. The matrix spike performed on field sample 79SS4 displayed percent recoveries greater than the upper control limits for 2-nitrotoluene at 133% and 3-nitrotoluene at 125%. Since the associated parent sample results were non-detect, no data qualifying action was taken. Field sample 79SS5 displayed a relative percent difference greater than the control limit of 40% between the dual column concentrations for nitrobenzene at 55.9%. This result was flagged J,g on both analytical column results reported.

For the inorganic analyses, the method blanks displayed the following detections:

Date	Time	Identification	Analyte	Result	Units
11/20/09	1429	9K20033-CCB3	Aluminum	0.023	mg/L
	1616	9K20033-CCB5		0.029	
	1628	9K20033-CCB6		0.021	
11/23/09	1359	9K23049-CCB2	Sodium	-0.055	mg/L
	1402	0913883-BLK2	Iron	0.55	mg/kg

Date	Time	Identification	Analyte	Result	Units
11/23/09	1439	9K23049-CCB3	Sodium	-0.069	mg/L
	1514	9K23049-CCB4		-0.058	
	1552	9K23075-CCB2	Arsenic	-0.00010	
	1725	9K23075-CCB4		-0.000066	

The associated field sample results for aluminum, arsenic, and iron were positive and greater than five times the absolute value of the reported blank concentrations, thus, no data qualifying action was required. The associated field sample results were positive and less then five times the absolute value of negative blank detections for sodium; these results were flagged L,o. The matrix spike pair performed on field sample 79SS4 displayed the following anomalies:

Analyte	Matrix Spike (%)	Matrix Spike Duplicate (%)	Control Limits
Arsenic	**74**	**78**	80-120
Copper	**79**	86	
Barium	**166**	99	
Selenium	**73**	**75**	
Silver	**32**	92	
Vanadium	**69**	**78**	

The associated field sample results were positive for barium and these results were flagged K,m. Postive associated field sample results for arsenic, copper, selenium, silver, and vanadium were flagged L,m while non-detects were flagged UL,m. The interference check sample IFA2 analyzed on 11/20/09 at 1256 displayed detections greater than half of the reporting limit for the unspiked elements cadmium and calcium. The associated field sample concentrations did not approximate the levels of the interfering elements (chromium or manganese) present in this standard, thus, no data qualifying action was taken.

Correctable Anomalies: None.

Comments: The samples are dried prior to metals digestion; the results are not adjusted for percent solids. In addition, the preparation volumes do not adjust the MDL/MRL until a greater than 6% difference in the default amount and actual amount is observed. Field sample 72SB3B was analyzed at dilution of 2 for PCB-1254 due to the abundance of this target compound present. Field sample 79SS4 was analyzed at various dilutions for aluminum, iron, and manganese due to the abundance of these target elements present. Field samples 79SS4, 72SB2B, and 72SB3B were analyzed at dilution of two for vanadium due to the abundance of this target element present. The reporting limits for these constituents were elevated appropriately. No anomalies were encountered if a given fraction was not mentioned. Except for data flagged "R", data are usable as qualified for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: Andrea Sansom
Date: December 21, 2009
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SSP1109
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do sample preservation, collection and storage condition meet method requirement?	X		
	If the temperature of the cooler was elevated (> 10 ^{O}C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		X	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	X		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	X		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	X		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.		X	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	X		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	X		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		X	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < control limit? Control limits: >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		X	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	X		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	X		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	X		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	X		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery							Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?						X		
6.2	Are surrogate recoveries within acceptance criteria (not to exceed 50-150%) for all samples and method blanks?						X		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?								X
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.								
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.								X
		1 or more <10%	1 high/low	2 or 3 high/low	2 or 3 all low	2 or 3 all high			
	Positives	L	J	J	L	K			
	Non-detects	R	UJ	UJ	UL	NONE			
	Note: The B qualifier remains over surrogate flagging.								

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 50-150%?	X		
7.4	Are there any RPD outside the QC limits not to exceed 50%?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 50-150%?	X		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			X
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	X		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	X		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).			X
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	X		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	X		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	X		
	Number of samples: 15			
	Number of target compounds in each analysis: 50			
	Number of results rejected and not reported: 7			
	% Completeness = 99%

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Volatile Organic Compounds by EPA Method 8260B

Qualification:	The LCS recovery was outside of the control limit with no allowed marginal exceedences. The result for this analyte in any sample from the associated QC batch is considered qualified.	
Analysis:	USEPA-8260B	
Sample/Analyte:	0911250-01 79554	Methylene Chloride
	0911250-02 79SB3B	Methylene Chloride
	0911250-03 79SS5	Methylene Chloride
	0911250-04 DUP	Methylene Chloride
	0911250-05 79SB1B	Methylene Chloride
	0911250-06 72SB2B	Methylene Chloride
	0911250-07 72SB3B	Methylene Chloride

Qualification:	The MS and/or MSD recovery was outside the control limit. The non-spiked sample result is considered estimated.	
Analysis:	USEPA-8260B	
Sample/Analyte:	0911250-01 79554	1,1,2-Trichloro-1,2,2-trifluoroethane
	0911250-01 79554	Carbon Disulfide

Qualification:	The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample result is considered estimated.	
Analysis:	USEPA-8260B	
Sample/Analyte:	0911250-01 79554	Carbon Disulfide
	0911250-01 79554	Methyl Acetate

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: Andrea Sansom
Date: December 21, 2009
DV Level: II III IV
Review Document:
_X_ NFG - Region III Modifications
_X_ Project QAPP/SAP

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SSP1109
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do sample preservation, collection and storage condition meet method requirement?	X		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 ^{o}C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		X	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	X		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.		X	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	X		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	X		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15%, ICV %D < 30%, and CCV %D ≤ 20%.	X		
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		X	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	X		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	X		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	X		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	X		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
6.2	Are surrogate recoveries within acceptance criteria not to exceed 10-150% for all samples and method blanks?	X		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			X
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			X
	1 or more <10% 2 or 3 high/low 2 or 3 all low 2 or 3 all high Positives L J L K Non-detects R UJ UL NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 10-150%?	X		
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 10-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			X
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	X		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	X		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		X	

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).			X
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			X

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	X		
	Number of samples: 7			
	Number of target compounds in each analysis: 67			
	Number of results rejected and not reported: 2			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 99.6%

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	
0911250-01 79554	3-Nitroaniline
0911250-01 79554	4-Methylphenol
0911250-01 79554	4-Nitroaniline
0911250-01 79554	Caprolactam

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	
0911250-01 79554	3-Nitroaniline

Qualification: The MS and/or MSD recovery was less than 10%. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount. The non-spiked sample result is considered unusable.

Analysis: USEPA-8270C

Sample/Analyte:	
0911250-01 79554	3,3´-Dichlorobenzidine
0911250-01 79554	4-Chloroaniline

DATA VALIDATION WORKSHEET

Pesticides/PCBs

Reviewer: Andrea Sansom
Date: December 21, 2009
DV Level: II III IV
Review Document:
X SW-846 - 8081/8082
X NFG - Region III Modifications
____ CLP

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SSP1109
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?		X	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.		X	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non detect DDT results, DDD/DDE - R(+).	X		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						X
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?	X		
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		X	
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		X	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

CLP requirement, not provided

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	7	7			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Organochlorine Pesticides by EPA Method 8081A

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8081A

Sample/Analyte:		
	0911250-01 79554	4,4'-DDT
	0911250-01 79554	Methoxychlor [2C]

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8081A

Sample/Analyte:		
	0911250-01 79554	Endrin Aldehyde [2C]
	0911250-01 79554	Methoxychlor [2C]

Qualification: The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The higher concentration result has been reported.

Analysis: USEPA-8081A

Sample/Analyte:		
	0911250-07 72SB3B	4,4'-DDE

Qualification: The surrogate recovery for TCMX was below the control limit on one of the two columns in the Matrix Spike Duplicate. The parent sample and the Matrix Spike had acceptable surrogate recoveries. No qualification is necessary.

Analysis: USEPA-8081A

Sample/Analyte: 0913908-MSD1

Qualification: The surrogate recovery for TCMX was below the control limit on one of the two columns in the Method Blank. All associated samples had acceptable recoveries. No corrective action was taken.

Analysis: USEPA-8081A

Sample/Analyte: 0913908-BLK1

DATA VALIDATION WORKSHEET

Explosives

Reviewer: Andrea Sansom
Date: December 21, 2009
DV Level: II III IV

Review Document:

_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SSP1109
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 ^{O}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.		X	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?	X		
6.4	Are there any RPDs outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		X	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.		X	
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	7			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Nitroaromatics & Nitramines by EPA Method 8330

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte:	
0911250-01 79554	2-Nitrotoluene
0911250-01 79554	3-Nitrotoluene

Qualification: The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The higher concentration result has been reported.

Analysis: USEPA-8330

Sample/Analyte:	
0911250-03 79SS5	Nitrobenzene

Qualification: Manual integration was performed on this sample for the analyte(s) listed below in accordance with the TriMatrix Manual Integration SOP. All necessary documentation, including the signed review, is included in the raw data section of the data package.

Analysis: USEPA-8330

Sample/Analyte:	
9F26032-CAL1	4-Nitroaniline
9F26032-CAL1	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)
9F26032-CAL2	4-Nitroaniline
9F26032-CAL2	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)
9F26032-SCV1	4-Nitroaniline
9F26032-SCV1	Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)

DATA VALIDATION WORKSHEET

Nitroglycerin/PETN

Reviewer: Andrea Sansom
Date: December 21, 2009
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SSP
Project Number: 11657490.40000
Laboratory: TriMatrix
SDG No.: SSP1109
Test Name: Nitroglycerin/PETN
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.		X	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	DQOs		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	7			
	Number of target compounds in each analysis:	2			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	X			X			X			X		

Note: _____

		6020			6010B			CVAA-Hg			Cyanide		
2.0 Holding Time		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		X			X			X			X	

Note: _____

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	6+BLK			4+BLK			5+BLK			6+BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	X			X			X			X		
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.										X		
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	X			X			X			X		
3.5	Was continuing calibration verification (CCV) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	X			X			X			X		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? For ICP 90%-110%; Hg 80-120%; CN 85-115%.	X			X			X			X		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?			X			X	X			X		
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	X			X			X			X		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	X			X			X			X		
4.3	Are there reported MB or ICB/CCBs values > MDL?		X		X				X			X	
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?	X			X				X			X	
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?			X			X			X			X
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	X			X								
5.2	Are the ICS AB recoveries within 80% - 120%?	X			X								
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?	X				X							
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			X		X							
	If not...												
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)												
	< -MDL > MDL < 50% 50% - 79% >120%												
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)												

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	X			X			X			X		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		X			X			X			X	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	X			X			X			X		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	X			X			X			X		

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	X			X			X			X		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		X			X		X			X		
	%R > 125% / 30%< %R < 74% / < 30%												
	Positive: K / L / L												
	Non-detect: None / UL / R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	X			X			X			X		

Note: _____

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	X			X			X			X		

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	X			X								
10.2	Was a five-fold dilution performed?	X			X								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	X			X								

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	X			X			X			X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	X			X			X			X		

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			X			X			X	X		
12.2	Were all dilution reflected in the positive results and detection limits?	X			X					X			X
12.3	Were the Internal Standard recoveries within 30-120%	X			X								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	X											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	X											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	X											

Note: 6020, 6010, 7471 soils were air dried before digestion therefore no percent solids adjustments were required.

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	X			X			X			X		
13.1.1	Number of samples: 7												
13.1.2	Number of target compounds in each analysis:												
13.1.3	Number of results rejected and not reported:												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness =	100%			100%			100%			100%

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Total Metals by EPA 6000/7000 Series Methods

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-6020A

Sample/Analyte:	
0911250-01 79554	Arsenic
0911250-01 79554	Selenium
0911250-01 79554	Silver
0911250-01 79554	Vanadium

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-6020A

Sample/Analyte:	
0911250-01 79554	Silver

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:	
0911250-01 79554	Barium

Analysis: USEPA-6020A

Sample/Analyte:	
0911250-01 79554	Copper

Qualification: This analyte was not present in this sample at a concentration greater than 50 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6010B

Sample/Analyte:	
0911250-01 79554	Beryllium

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was greater than or equal to 4 times the spiked amount; the non-spiked sample result is not qualified.

Analysis: USEPA-6010B

Sample/Analyte:	
0911250-01 79554	Aluminum
0911250-01 79554	Iron

SDG CASE NARRATIVE

URS Corporation
RFAAP SSP at Six Sites

SDG Executive Summary

This case narrative applies to samples received on November 12, 2009. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between URS Corporation and TriMatrix Laboratories, Inc..

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations and reporting conventions are included in Attachment 1 - *Project Technical Narrative.*

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications.* The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Conference (NELAC). Estimates of analytical uncertainties for the test results contained within the report are available upon request.

SDG CASE NARRATIVE

Sample Receipt and Login -- Work Order: 0911250

TriMatrix Laboratories received the cooler(s) for this work order on November 12, 2009, at 09:30am. Receiving documents include field chain-of-custody (COC) record(s), sample receipt form(s), and FedEx shipping document(s). The condition of the custody seals, the type and location of the coolant, and the temperatures recorded for each cooler are presented on the TriMatrix *Sample Receiving / Log-In Checklist* provided in section A of this package. The receipt temperature of the samples was determined by using an infrared thermometer to record the temperature of three random samples of varying container types and the accompanying temperature blank, if present.

Samples were scheduled for the analyses listed on the corresponding COC form. Field IDs and assigned laboratory identifiers are presented in the table below.

Field Sample Name	Laboratory Sample ID	Matrix	Date Sampled
79554	0911250-01	Soil	11/11/2009
79SB3B	0911250-02	Soil	11/11/2009
79SS5	0911250-03	Soil	11/11/2009
DUP	0911250-04	Soil	11/11/2009
79SB1B	0911250-05	Soil	11/11/2009
72SB2B	0911250-06	Soil	11/11/2009
72SB3B	0911250-07	Soil	11/11/2009

No administrative issues were encountered during the receipt and analysis of this work order.

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. For cases in which the analyte is not listed in the QSM, internal laboratory control limits were used.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a “Reason Code”. The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	b	Laboratory duplicate imprecision
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	c	Calibration failure
d	MS/MSD imprecision	d	MS/MSD imprecision	d	MS/MSD imprecision
e	LCSD imprecision	e	LCSD imprecision	e	LCSD imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	f	Field duplicate imprecision
g	Tuning failure or poor mass spec performance	g	Dual column confirmation imprecision	g	Duel isotope imprecision
h	Holding time violation	h	Holding time violation	h	Holding time violation
i	Internal standard failure	i	Internal standard failure	j	Vial Headspace
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits
l	LCS recovery failure	l	LCS recovery failure	l	LCS recovery failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	m	MS/MSD recovery failure
p	Poor chromatography	p	Poor chromatography	n	ICS failure
q	Concentration exceeded the linear range	q	Concentration exceeded the linear range	o	Calibration blank contamination
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	p	Preparation blank contamination
s	Surrogate failure	s	Surrogate failure	q	Concentration exceeded the linear range
t	TIC	u	No confirmation column	r	Linearity failure in calibration or MSA
w	Identification criteria failure	w	Retention time failure	s	Serial dilution failure
x	Field blank contamination	x	Field blank contamination	u	BOD minimum depletion did not exceed 2mg/L
y	Trip blank contamination	z	Method blank contamination	v	Post-digestion spike failure
z	Method blank contamination			w	CRDL Standard Failure
				x	Field blank contamination

Blank Analysis Summary

Month/Year: Nov-09 Westmont, New Jersey

Type of Analysis	Total	Pass	Failure	Pass %	Failure%
Water-040927443	1	1	0	100.0	0

*Prep 1 lab blank/AHERA set, Analyze 1/25 or when any sample is > 70 st/mm^2

** Prep 1blank for every 20 samples analyzed

Pass/Fail Criteria: Single prep < 53 s/mm^2. Cumulative average < 18s/mm^2

Pass/Fail Criteria: Failure occurs if any ACM is found in non-ACM material.
