### A. Sample Preparation:

Florisil cleanup was used to minimize interferences. No other problems were encountered with the preparation of the samples.

### B. Analysis:

The analysis was performed using the following runs:

- 1H14048, 1H14048B, 2H14048, 2H14048B

No problems were encountered. All continuing calibration data are within method specifications since if any individual target analytes have a %D value outside the 15% criteria, then the average %D value of the standard is within the 15% criteria.

### C. Quality Control:

The surrogate for sample UN7NV is outside the QC limits high. Since there is no analyte if interest detected in this sample and it was out of specification high, this surrogate is reported. All other reported surrogates are within the QC limits.

The matrix spike data are within the QC limits.

The LCS data are within the QC limits.

### D. Data Interpretation:

The method blank was evaluated to the MDL. Values between the MDL and the LOQ are reported with a "J" qualifier.

No further interpretation is needed.

Lancaster Laboratories

**Data codes:**

Detected analytes are reported using the higher of the two column results in accordance with the method. Data with analytes showing disparity >40% are further evaluated for reporting based on chromatographic appearance. The analytes will be coded with a comment number on the data sheet. The comments are explained below:

- 1569 - A disparity of >40% between the primary and confirmatory analysis occurred. Due to suspected interference, the lower result was reported.
- 1570 - A disparity of >40% between the primary and confirmatory analysis occurred. Since no chromatographic anomalies were apparent, the higher result was reported.

Data that indicates that manual integration was required would include the following codes:
1 = missed peak and 2 = improper baseline. The peaks that have been manually changed are indicated with an "M" on the raw data.

Lancaster Laboratories

*Where quality is a science.*

CASE NARRATIVE FOR INORGANICS

Laboratory Name: Lancaster Laboratories

SDG Number: RAV02

Date Received: 02/19/04

Dilutions:

Refer to the analysis run logs for samples requiring dilutions.

Explanatory Notes:

The instrument detection limits (IDLs) are used for determining the U flags on the initial and continuing calibration blanks. The highest IDL is selected when multiple instruments are used for an analysis. The method detection limits (MDLs) are used for determining all other U flags.

Calibration Standards:

Instrument calibration standards are prepared monthly from stock solutions purchased from Aldrich Chemical, EM Science, Fisher Scientific, High Purity, Inorganic Ventures, JT Baker, Spex Industries Inc., Ultra Scientific, or VHG Laboratories.

8843

The 61E TRACE ICP uses a Crawford-Kunselman Noise Reduction Technique for lead and selenium. This requires the utilization of the first and second order wavelengths in the calculation of each of these metals determinations. The 61E TRACE ICP also utilizes Yttrium as an internal standard to compensate for fluctuations in nebulization and plasma conditions. All Yttrium readings are expressed in counts.

standard to compensate for fluctuations in nebulization and plas[redacted]
All Yttrium readings are expressed in counts.

## Case Narrative

**CLIENT:** Draper Aden Associates, Inc.
**SDG:** RAV02

**Lancaster Laboratories**
**Instrumental Analysis**

**Sample Numbers:**

| LLI #'s | Sample Code | Comments |
|---|---|---|
| 4219021 | UNIT7 | MSD/MS/BKG |

**Analysis:**
Dilutions are listed in the table below:

| Sample | Reactive Cyanide |
|---|---|
| 4219021M | 5 |
| 4219021S | 5 |
| LCS/F | 250 |
| LCS/S | 10 |

**Quality Control and Non Conformance Summary:**
QC was within specifications.

**Data Interpretation:**
No further interpretation of data is needed.

Comments:

If the background and/or matrix spike/matrix spike duplicate result is less than five times the limit of quantitation, the RPD is not considered applicable and is program deleted.

If the background result was more than four times the spike added amount the percent recovery is program deleted.

TOC = Total Organic Carbon
TOX = Total Organic Halogens
TC = Total Carbon
RA = Rapid Analyzer

*Note: The MDL and LOQ for moisture are the same to avoid inconsistencies between reporting types

**Note: To obtain values for Total phosphorus as PO4(#345,5894), multiply above values by 3.07

Reported MDL's are based on calculated MDLs for most compounds. Some reported MDLs are set higher based on our experience with specific compounds.

| 4219021 | UNIT7 | |

**ANALYSIS:**
No problems were encountered during analysis.

**QUALITY CONTROL AND NONCONFORMANCE SUMMARY:**
QC was within specification.

**DATA INTERPRETATION:**
Determination of corrosivity is based on the pH values.

No further interpretation is necessary for the data submitted.

Comments: If the background and/or the duplicate result was less than the limit of quantitation, the RPD is not required.

If the background and/or duplicate result is less than five times the limit of quantitation, the RPD is not considered applicable and is program deleted.

# METHODOLOGY SUMMARY/REFERENCE

## *6006 Solid Sample Pesticide Extraction*

A sonic probe extraction with hexane and acetone is used. Alternatively, the sample may be soxhlet extracted with hexane and acetone. Florisil cleanup is used to minimize interference.

Reference: Test Methods for Evaluating Solid Wastes, SW-846, Method 3550B, December 1996 (Sonic Probe)

**********

## *1225 TCL Pesticides in Solids*

The sample is solvent extracted and cleaned using a Florisil column. The resulting extract is quantitatively analyzed by gas chromatography with an electron capture detector.

Reference: Test Methods for Evaluating Solid Waste SW-846, Method 8081A/8082, December 1996

**********

## *4688/4689 TCL Semivolatiles by 8270C (soils)*

The sample is solvent extracted and then analyzed by GC/MS for the target compound list.

Reference: Test Methods for Evaluating Solid Waste SW-846, Method 8270C, Update III, December 1996

**********

## *0111 Moisture (solid)*

A well mixed sample is placed in a tared container and dried to constant weight in an oven at 103-105C. The decrease in weight is the total moisture.

Reference: Methods for Chemical Analysis of Water and Wastes USEPA 600/4-79-020, Method 160.3 (modified)

6004

## 0118 Moisture (solid)

This value reflects the background moisture value. It is used to calculate dry weight reports for matrix spike and matrix spike duplicate samples.

Reference: See background sample moisture method reference

**********

## 0121 Moisture Duplicate (solid)

This analysis is required to check the precision of the moisture analysis. The value is not used in report calculations.

Reference: See background sample moisture method reference

**SAMPLE PREPARATION:**

No problems were encountered during the extraction of these samples.

0054

## Case Narrative (continued)
## SDG: RAV04

**ANALYSIS:**

The method used for analysis was SW-846 8270C.

All samples were analyzed for the SOW OLM03.2 list of semivolatile compounds.

3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The 4-methylphenol value is a combination of results from both compounds.

No problems were encountered during the analysis of these samples.

**QUALITY CONTROL AND NONCONFORMANCE SUMMARY:**

Di-n-butylphthalate was detected in SBLKLC0857 at a concentration below the limit of quantitation. This value was not subtracted from the analytical results of the associated samples.

The relative percent difference (RPD) for hexachlorocyclopentadiene between 7GP45MS and 7GP45MSD was greater than 30 percent.

The RPD's for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol between 7GP17MS and 7GP17MSD were greater than 30 percent.

All other QC was within specifications.

**DATA INTERPRETATION:**

Only non-conformances for client requested compounds are addressed in this case narrative.

Sample numbers 4241646 and 4241647 are represented on forms as 5GP45MS and 5GP45MSD, respectively, in this data package.

No further interpretation is necessary for the data submitted.

Lab Name: Lancaster Laboratories Contract:_____

Lab Code: LANCAS Case No.:_____ SAS No.:_____ SDG No.:_____

Matrix: (soil/water) SOIL Lab Sample ID: SBLKLA087

Sample wt/vol: 30 (g/mL) G Lab File ID: dc388.d

Level: (low/med) LOW Date Received:

% Moisture: not dec: dec: Date Extracted: 03/27/04

Concentrated Extract Volume: 1000 (uL) Date Analyzed: 03/29/04

Injection Volume: 1 (uL) Dilution Factor: 1.0

GPC Cleanup: (Y/N) N pH: Extraction: Sonc

| CAS NO. | COMPOUND | CONCENTRATION UNITS: (ug/L or ug/Kg) | MDL | UG/KG | Q |
|---|---|---|---|---|---|
| 50-32-8 | Benzo(a)pyrene | | | 33 | U |

(1) Cannot be separated from Diphenylamine

4,6-Dinitro-2-methylphenol and 4-Nitrophenol are at 10 ng/ul in the 5 standard.

Benzoic acid, Pentachlorophenol and 2,4-Dinitrophenol are at 15 ng/ul in the 5 standard.

Benzidine Levels in the 5,15,30,50,80,120 standards are 15,45,90,150,240,360 ng/ul, respectively.

Benzoic acid, Pentachlorophenol and 2,4-Dinitrophenol are at 15 ng/ul, 30 ng/ul,40 ng/ul in the 5 ,15, 30 standards.

(1) Cannot be separated from Diphenylamine

0235

4,6-Dinitro-2-methylphenol and 4-Nitrophenol are at 10 ng/ul in the 5 standard.
Benzoic acid, Pentachlorophenol and 2,4-Dinitrophenol are at 15 ng/ul in the 5 standard.
Benzidine Levels in the 5,15,30,50,80,120 standards are 15,45,90,150,240,360 ng/ul, respectively.
Benzoic acid, Pentachlorophenol and 2,4-Dinitrophenol are at 15 ng/ul, 30 ng/ul,40 ng/ul in the 5 ,15, 30 standards.

Data File: /chem/HP06777.i/04mar20.b/gc289.d  Instrument ID: HP06777.i
Injection date and time: 20-MAR-2004 18:54  Analyst ID: jmg00068

Method used: /chem/HP06777.i/04mar20.b/m8270.m  Sublist used: all1
Calibration date and time: 21-MAR-2004 14:17
Date, time and analyst ID of latest file update: 21-Mar-2004 15:13 jbs01304

Sample Name: SSTD001  Lab Sample ID: 8270MDL0494

Compound Number : 175
Compound Name : Indeno(1,2,3-cd)pyrene
Scan Number : 3943
Retention Time (minutes): 46.315
Quant Ion : 276
Area (flag) : 28264 M
Concentration (ng/ul) : 0.9742
Integration start scan : 3925  Integration stop scan: 3955
Y at integration start : 0  Y at integration end: 0

Reason for manual integration (circle one): missed peak improper integration

Analyst responsible for change: [signature]

GC/MS audit/management approval: [signature] 3/23/04

### A. Sample Preparation:

Florisil and Copper cleanups were used to minimize interferences. The samples were originally scheduled for an additional acid cleanup; however this cleanup was never performed. Dilutions were required for various samples due to the aroclor concentration detected in the samples. No other problems were encountered with the preparation of the samples.

### B. Analysis:

The analysis was performed using the following runs:

- 1C13088, 1C13088B, 2C13088, 2C13088B

No problems were encountered. All continuing calibration data are within method specifications since if any individual target analytes have a %D value outside the 15% criteria, then the average %D value of the standard is within the 15% criteria.

A retention time update was performed using calibration files 1C13088.73-.74 and the calibration name changed to 2C13088.

### C. Quality Control:

5491

All reported surrogates are within the QC limits.

Lancaster Laboratories

The matrix spike data is outside the QC criteria. See Form 3 for matrix spike data.

The LCS data are within the QC limits.

**D. Data Interpretation:**

The method blank was evaluated to the MDL. Values between the MDL and the LOQ are reported with a "J" qualifier.
The reporting limits for heptachlor, heptachlor epoxide, and endosulfan II were raised due to interference from aroclors detected in samples 7GP17, 7GP18, 7GP22, and 7GP23. The reporting limit for endosulfan II was raised due to interference from aroclors detected in samples 7GP19 and 7GP45. The reporting limits for heptachlor epoxide and endosulfan II were raised due to interference from aroclors detected in samples UGP21 and 2222D.
No further interpretation is needed.

**Data codes:**

Detected analytes are reported using the higher of the two column results in accordance with the method. Data with analytes showing disparity >40% are further evaluated for reporting based on chromatographic appearance. The analytes will be coded with a comment number on the data sheet. The comments are explained below:

- 1569 - A disparity of >40% between the primary and confirmatory analysis occurred. Due to suspected interference, the lower result was reported.
- 1570 - A disparity of >40% between the primary and confirmatory analysis occurred. Since no chromatographic anomalies were apparent, the higher result was reported.

Data that indicates that manual integration was required would include the following codes:
1 = missed peak and 2 = improper baseline. The peaks that have been manually changed are indicated with an "M" on the raw data.
