Subject: Draft SWMU 49 Monitored Natural Attenuation Sampling Year Seven Report
Contract No. W912DR-15-D-0022, Delivery Order No. W912DR18F0492
Military Munitions Response Program (MMRP) Munitions Response Services
Radford Army Ammunition Plant, Radford, Virginia

Dear Ms. Walworth:

Attached is an electronic copy (Word and PDF) of the Weston Solutions, Inc. (WESTON®) *Draft SWMU 49 Monitored Natural Attenuation Sampling Year Seven Report* for the Environmental and Munitions Response Services – Radford Army Ammunition Plant (RFAAP), in Radford, VA, for review and comment.

We have also provided a copy to RFAAP, the U.S. Army Environmental Command (USAEC), and BAE Systems for their review and comment.

If you have any questions or comments, please do not hesitate to contact me at 757.362.2461.

Very truly yours,
WESTON SOLUTIONS, INC.

Tony Pace
Principal Project Manager

1. INTRODUCTION

Weston Solutions, Inc. (WESTON®) has been contracted by the United States (U.S.) Army Corps of Engineers (USACE), Baltimore District, to perform long-term monitoring (LTM) and monitored natural attenuation (MNA) at Solid Waste Management Unit (SWMU) 49 (RAAP-013), Propellant Burning Ash Disposal Area, at Radford Army Ammunition Plant (RFAAP), Radford, VA. This report provides a description of the groundwater sampling activities completed and an analysis of results from the twenty-fifth and twenty-sixth semiannual rounds conducted in 2021 (October) and 2022 (April). Further, this report provides a summary of the Year Seven sampling, consisting of those two sampling events.

This work was performed under Contract Number (No.) W912DR-15-D-0022, Delivery Order No. W912DR18F0492, in accordance with the *Final Master Work Plan, Quality Assurance Plan, Health and Safety Plan* (RFAAP Final MWP) (URS Corporation [URS], 2003) and with Part II (D)(11-21) Interim Measures of the RFAAP Resource Conservation and Recovery Act (RCRA) Corrective Action Permit (U.S. Environmental Protection Agency [USEPA], 2000). Based on the consistency of the data and the fact that quarterly monitoring had been conducted for a full 6 years, groundwater monitoring starting with Year Seven was reduced to a semiannual basis at the 15 monitoring well locations. The Virginia Department of Environmental Quality (VDEQ) approved this recommendation, which was presented in the Year Five report. In October 2021, VDEQ concurred with RFAAP's Class 1 Modification request for the permit, which recommended removal of references to the sampling frequency specified in the Monitored Natural Attenuation Groundwater Monitoring Plan for SWMU 49 contained in Attachment C of the permit.

Groundwater at the SWMU 49 study area has been investigated from the mid-1990s through 2020 and has been fully characterized and delineated. Based on the contamination assessment and human health risk assessment (HHRA) performed and presented in the Draft *SWMU 48/49 RCRA Facility Investigation Report* (Draft SWMU 48/49 RFI Report) (CB&I Federal Services LLC [CB&I], 2014a), carbon tetrachloride (CT) and trichloroethene (TCE) were identified as the primary contaminants of concern (COCs). Note that SWMU 49 used to be a combined study area with SWMU 48; however, previous investigations and sample data have determined that suspected contaminants reportedly disposed of at SWMU 48 were, in fact, likely disposed at SWMU 49.

Therefore, this report concerns only contamination associated with SWMU 49. CT and TCE were identified as the COCs that are contributing to potential future industrial and residential risk at the study area. Based on the MNA results presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015), MNA processes, including biodegradation, sorption, dilution, dispersion, and chemical stabilization, are occurring in groundwater at the SWMU 49 study area.

The Year Seven MNA sampling program was developed and conducted in accordance with the USEPA- and VDEQ-approved Draft SWMU 48/49 RFI Report (CB&I, 2014a) and the Draft Final SWMU 49 MNA Groundwater Monitoring Work Plan (CB&I, 2014b). The corrective measures objectives (CMOs) and remedial goals (RGs) were developed and presented in the Draft SWMU 48/49 RFI Report (CB&I, 2014a). The site-specific CMO for SWMU 49 is to reduce COC (i.e., CT and TCE) concentrations to below the RGs/maximum contaminant levels (MCLs) to avoid adversely impacting future beneficial use of groundwater and, to the extent practicable, to achieve the goal of restoring site groundwater to the most beneficial use.

The objectives of the MNA program are as follows:

- To measure and track the reduction of CT and TCE to levels below the RGs as defined in **Table 1-1**.
- To monitor and evaluate the daughter products of the COCs to determine the progress (effectiveness and timeliness) of the degradation process.

1.1 SITE DESCRIPTION AND BACKGROUND

SWMU 49 is located in the southeastern portion of the RFAAP Horseshoe Area, east of the main bridge over the New River. As shown in **Figure 1-1**, the study area is situated on a bluff approximately 120 feet (ft) above and overlooking SWMU 13 and the New River. The SWMU 49 study area is approximately 75 ft long by 83 ft wide and is situated adjacent to SWMUs 48, 50, and 59. Previously, SWMU 49 was combined with these three adjacent areas.

As presented in previous reports (CB&I, 2014a and 2014b), SWMU 49 reportedly received 10 tons of red water ash during its active period. However, the results of environmental sampling to date indicate that the red water ash was likely disposed of in the disposal trenches associated with neighboring SWMU 48. Conversely, sampling indicates that the only wastewater associated with SWMU 48 was disposed of in the SWMU 49 area.

Table 1-1 SWMUs 48 and 49 Groundwater Remedial Goals

Chemical of Interest	Groundwater RG (µg/L)	Groundwater RG Source*[1]
Carbon Tetrachloride	5.0	MCL
Trichloroethene	5.0	MCL

Notes:
* RGs are also the MCLs listed in the USEPA *2018 Edition of the Drinking Water Standards and Health Advisories Tables* (USEPA, 2018).

[1] RGs developed and presented in Draft SWMU 48/49 RFI Report (CB&I, 2014a).

µg/L = micrograms per liter
MCL = maximum contaminant level
RFI = RCRA Facility Investigation
SWMU = Solid Waste Management Unit
RCRA = Resource Conservation and Recovery Act
RG = remedial goal
USEPA = U.S. Environmental Protection Agency

2. PHYSICAL CHARACTERISTICS

2.1 TOPOGRAPHY

The land surface at SWMU 49 slopes gently from 1,830 ft above mean sea level (amsl) on the north side of the site to approximately 1,816 ft amsl on the southeast side of the site. The southeast side ends abruptly at a bluff that rises approximately 120 ft above the Burning Grounds (SWMU 13) and the New River. In general, the topography is uneven and hummocky with several small draws and topographic highs.

2.2 SURFACE WATER

SWMU 49 is located on a bluff approximately 120 ft above the New River. Based on topography, surface water runoff is expected to flow approximately 700 ft south to the New River.

2.3 GEOLOGY

2.3.1 Regional Geology

SWMU 49 is located in the New River Valley, which crosses the Valley and Ridge Province approximately perpendicular to the regional strike of bedrock, and cross cuts Cambrian and Ordovician limestone or dolostone. Deep clay-rich residuum is prevalent in areas underlain by carbonate rocks. The valley is covered by river floodplain and terrace deposits; karst topography is dominant throughout the area. A more detailed description of the regional geology is presented in the RFAAP Final MWP (URS, 2003).

2.3.2 Site-Specific Geology

The lithology of the SWMU 49 subsurface was characterized during the advancement of soil borings and monitoring well borings at the site. One soil boring (48SB05) was advanced within SWMU 49 to 37 ft in depth. In addition to soil boring 48SB05, two monitoring wells were installed directly north and south of the target study area: 48MW1 and 48MW2, respectively. Plan views of lines A-A' and B-B' that run through the adjacent sites of SWMU 48, SWMU 50, and SWMU 59 are presented in **Figure 2-1**, with geologic cross sections of A-A' and B-B' presented in **Figures 2-2** and **2-3**, respectively. Based on the borings, the subsurface geology consists of alluvium and residual deposits comprising clay and silt with some sand and gravel overlying

bedrock. Monitoring well 48MW1 was advanced to 154 ft below ground surface (bgs), with the bedrock elevation encountered at 72 ft bgs. Monitoring well 48MW2 was advanced to 133.7 ft bgs, with the bedrock elevation encountered at approximately 41 ft bgs. Depths to bedrock were directly measured at the monitoring well borings. Bedrock elevations ranged from approximately 1,745 to 1,776 ft amsl, with the bedrock surface sloping to the north.

Depth to competent bedrock at the site ranges from approximately 41 to 72 ft bgs. A saprolitic layer, formed from in situ weathering of the carbonate bedrock, immediately overlies the competent bedrock. The saprolite is up to 10 ft in thickness.

Bedrock consists of highly fractured interbedded siltstone, limestone, and dolostone of the Elbrook Formation. The Max Meadows Breccia is evident in outcrops along the slope leading to the river. In the outcrop along the slope, the tectonic breccias and the limestone and dolostone are highly weathered with many solution cavities. The unconsolidated sediment immediately overlying the saprolite consists of alluvial deposits.

Alluvial deposits, consisting primarily of silty sand, overlie channel deposits of fine- to coarse-grained sand and gravel (river jack). These Paleo-channel deposits rest directly on the saprolite. Portions of the disposal areas contain fill material to depths of 9 to 10 ft bgs. A more detailed discussion of the geology and soil at RFAAP is presented in Sections 3.4 through 3.7 of the RFAAP Final MWP (URS, 2003) and in the *Facility-Wide Background Study* (IT Corporation [IT], 2001).

2.4 HYDROGEOLOGY

2.4.1 Regional Hydrogeology

Geologically, the Appalachian Plateaus and Valley and Ridge Province encompass two major tectonic domains: the southern Appalachian Basin and the southeastern part of the Eastern Interior Basin. The hydrogeologic framework is based on generalized stratigraphic succession, with indurated sedimentary rocks of the Paleozoic age forming predominant units.

Groundwater flow paths are typically short, commonly extending no more than several miles in their longest dimension. The largest groundwater supplies are produced from the carbonate rocks, especially where they are associated with thick regolith, an important storage reservoir throughout

the entire area. The regolith serves as a store of recharge that would otherwise be rapidly diverted to overland flow. It also slowly releases water to underlying carbonate aquifers. Because of the widespread distribution of carbonate rocks and associated regolith, abundant precipitation in a humid climate, and relatively steep hydraulic gradients, this region (and locality) is one of the major karstlands in the eastern United States.

Groundwater supplies in the Valley and Ridge Province are generally good quality compared to surface water supplies (Parsons Engineering Science, Inc. [Parsons], 1996). Because of extended contact with minerals, however, many groundwater supplies contain higher levels of dissolved solids than the streams into which they discharge. Because of sinkholes and underground caverns in karst aquifers, there is a high potential for groundwater to be impacted by direct infiltration of contaminated surface water.

2.4.2 Site-Specific Hydrogeology

Monitoring wells installed at SWMU 49 were screened in both the surficial unconsolidated deposits and the underlying bedrock. Boring logs and well construction diagrams for the SWMU 49 study area wells are presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015). Water levels were measured in the wells to determine the groundwater flow direction at the site. A groundwater contour map prepared from the baseline MNA monitoring completed in January 2015 is provided in **Figure 2-4**. A steep bluff separates SWMU 49 and SWMU 13; therefore, no monitoring wells are positioned between these sites. Contour lines shown in the figure represent lines of equal elevation of the water table; consequently, groundwater flow direction is always perpendicular to the contour lines and feeds into the New River, which generally runs a south-to-north course, but west-to-east at this location. Groundwater at the site tends to flow south toward SWMU 13 and appears to discharge to the New River, south of the study area. Groundwater elevations at SWMU 49 vary minimally from each of the four sampling quarters, suggesting little seasonal impact on groundwater elevations. Based on the Year Seven groundwater elevations recorded, the flow direction did not change appreciably from semiannual event to semiannual event (see discussion in Sections 4.1.1 and 4.2.1).

3. PREVIOUS INVESTIGATIONS

Seven prior investigations have been conducted at the previously combined study area including SWMUs 48 and 49. In 1987, a RCRA Facility Assessment was conducted to evaluate potentially hazardous waste or hazardous constituent releases and to implement corrective actions, as necessary (U.S. Army Toxic and Hazardous Materials Agency, 1987). In 1992, Dames and Moore performed a verification investigation (VI), which included surface and subsurface soil sampling and a soil gas survey to characterize the nature and extent of contamination (Dames and Moore, 1992). In 1996, Parsons conducted a RCRA Facility Investigation (RFI) to further delineate the extent of contamination identified during the 1992 VI sampling (Parsons, 1996). ICF Kaiser Engineers also performed an RFI in 1999 to further refine the understanding of the nature and extent of contamination identified during the previous investigations (ICF Kaiser, 1999). Additional RFI sampling was conducted by IT/Shaw Environmental, Inc. in 2002, 2006, 2007, and 2013 to collect sufficient data to complete HHRAs and ecological risk assessments (CB&I, 2014a).

In 2014, USEPA and VDEQ approved the Draft SWMU 48/49 RFI Report (CB&I, 2014a), which developed the CMOs and RGs for the MNA program. Direct-push soil borings and the installation and sampling of new and existing monitoring wells were used to characterize the nature and extent of constituents in soil and groundwater at the SWMU 48/49 combined study area, to identify the lateral and vertical extent of impacted soil and chlorinated solvents in groundwater, and to characterize soil lithology and depth to groundwater and bedrock. Details of these investigations are described in Section 3.0 (Field Investigation Program) of the approved Draft SWMU 48/49 RFI Report (CB&I, 2014a). Historical data presenting the SWMU 49 volatile organic compound (VOC) concentrations for CT and TCE in the study area wells can be found in **Tables 3-1** through **3-5**.

WESTON has performed the LTM and MNA at SWMU 49 since October 2019 through the present, including the seventeenth through twentieth quarterly sampling rounds for Year Five of sampling at RFAAP, twenty-first through twenty-fourth quarterly sampling rounds for Year Six of sampling at RFAAP, and twenty-fifth and twenty-sixth semiannual sampling rounds for Year Seven of sampling at RFAAP. The nature and extent assessment identified several VOCs and metals in groundwater as elevated and contributing to potential future risks. Two of the VOCs

associated with potential future industrial and residential risk in the HHRA (CT and TCE) were present above USEPA's MCLs (USEPA, 2018) during the multiple groundwater sampling events at the study area. A comparison of concentrations from the mid-1990s to 2019 indicates that the majority of the VOCs are no longer present in these sampled areas and have broken down through natural processes. Analysis of the groundwater data during this roughly 20-year period shows that concentrations of the CT and TCE plume have changed as follows: (1) decreased overall, (2) decreased to 1 microgram per liter (µg/L) surrounding the center of the plume, and (3) decreased at least by one-half in the center of the plume. The presence of daughter products (i.e., chloroform and cis-1,2-dichloroethene [cis-1,2-DCE]) in groundwater at the study area indicates that limited biological degradation of the chlorinated solvents is occurring.

The HHRA determined that CT and TCE are the primary COCs in groundwater that are contributing potential future industrial and residential risk at the SWMU 49 study area. Because the RFI demonstrated that groundwater contamination is present at concentrations associated with unacceptable human health concerns, CMOs and RGs were developed to address the concerns.

The site-specific CMOs for SWMU 49 are: to reduce COC concentrations to below RGs/MCLs to avoid adversely impacting future beneficial use of groundwater, and, to the extent practicable, to achieve a goal of restoring site groundwater to the most beneficial use. The SWMU 49 groundwater COCs have been identified as CT and TCE. The groundwater RGs (presented in **Table 1-1** of this report) will be used to compare results from groundwater monitoring wells to assess the progress of the MNA.

Table 3-6 provides the analytical results presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015). In the initial 2012 sampling, the highest concentrations of CT and TCE were observed in monitoring wells 48MW2 and 48MW3. The plumes are small, appear to be isolated, and have not changed in dimension since 2013. Recommendations provided in the SWMU 49 MNA Sampling Baseline Report called for further monitoring of CT, TCE, and daughter products of these VOCs within the SWMU. The rationale of continued monitoring is to evaluate the effectiveness of the MNA processes.

Table 3-1 COCs Detected in SWMUs 48 and 49 Groundwater Samples – 1996 RFI

Notes:

Bold outline indicates an RG exceedance.
µg/L = micrograms per liter (parts per billion)
CCV = continuing calibration verification
ICV = initial calibration verification
ID = identification
MDL = method detection limit
MRL = method reporting limit
NA = not applicable
NT = Analyte not tested
RCRA = Resource Conservation and Recovery Act
RFI = RCRA Facility Investigation
RG = remedial goal
VOC = volatile organic compound

Lab Q = laboratory data qualifiers
D = Sample was run at a dilution.
J = Value less than MRL and greater than MDL and is considered estimated.
N = Matrix spike/matrix spike duplicate accuracy and/or precision were outside criteria.
U = Analyte not detected at the method reporting limit.
X = The associated ICV/CCV exceeded the upper control limit.

Val Q = validation data qualifiers
B = Blank contamination. Value detected in sample and associated blank.
J = Estimated concentration.

4. FIELD ACTIVITIES

This section provides a discussion of field activities conducted by WESTON in the Year Seven MNA semiannual monitoring at SWMU 49.

The Year Seven groundwater monitoring consisted of two sampling events conducted in October 2021 (twenty-fifth event) and April 2022 (twenty-sixth event). Fifteen monitoring wells were included in the monitoring well network, 11 of which were sampled on a semiannual basis and 4 on an annual basis in 2022. The Year Seven MNA groundwater monitoring consisted of a synoptic water level measurement and sampling of the 15 point of compliance (POC) monitoring wells for target compound list (TCL) VOCs and dissolved gases (methane, ethane, ethene). In addition, the following indicator parameters were collected: total organic carbon (TOC), dissolved ferrous iron (Fe^{2+}), and the anions chloride, nitrate, and sulfate. Water quality parameters collected during low-flow sampling included corrosivity/hydrogen ion concentration (pH), temperature, specific conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity utilizing a daily calibrated Yellow Springs Instrument (YSI) water quality meter. The list of monitoring wells and sample frequency is provided in **Table 4-1**. Groundwater samples were submitted to a U.S. Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) accredited laboratory (CT Laboratories, LLC). Field activities were conducted in accordance with the Draft Final SWMU 49 MNA Groundwater Monitoring Work Plan (CB&I, 2014b). Copies of the groundwater sample forms and meter calibration records are presented in **Appendices A-1** and **A-2**, respectively.

4.1 TWENTY-FIFTH GROUNDWATER SAMPLING

Groundwater elevation measurements and samples were collected from 11 POC monitoring wells. The twenty-fifth event of groundwater sampling was conducted 25 through 28 October 2021. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this semiannual event are provided in **Figure 4-1**.

4.1.1 Groundwater Elevation Measurements

Water level elevations were collected during each Year Seven event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-2** provides the measured

depth-to-water (DTW) levels (from the top of the casing) and groundwater elevations amsl collected on 26 October 2021. **Figure 4-2** presents a groundwater elevation contour map developed from the elevation data collected during this semiannual monitoring event. Groundwater contours were derived using the Environmental Systems Research Institute (Esri) ArcGIS Desktop Spatial Analyst 10.7.1 software and creating a spline interpolated continuous surface based on limited groundwater data collected in the field. The surface model was executed using default values in most cases and was forced to cover an area inclusive of all wells using the extent polygon to define the area of interest. Contour lines were then constructed from the output splined surface at 10-ft and 2-ft intervals, depending on the site, with zero base contour. The results of the automated processing were then reviewed by subject knowledge experts and manually adjusted to accurately represent ground conditions.

4.1.2 Groundwater Sampling

Groundwater samples were collected from 11 of the 15 POC monitoring wells from 26 through 28 October 2021 and analyzed for the analytical suites covering TCL VOCs and the dissolved gases (methane, ethane, and ethene). In addition, the following indicator parameters were collected: TOC, dissolved Fe^{2+}, chloride, nitrate, and sulfate. Water quality parameters collected during low-flow sampling included pH, temperature, specific conductivity, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49. **Table 4-1** presents the suite of analytes collected for analysis during the twenty-fifth monitoring event.

Groundwater samples were collected by low-flow peristaltic pumps to obtain representative groundwater samples and to minimize investigation-derived waste (IDW) purge water. The following procedures were followed during both semiannual groundwater monitoring events:

1. A photoionization detector (PID) reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.

2. During the water level sweep, DTW and total depth measurements were recorded to determine the amount of water in the well casing and sand pack. Only approximate total well depths were measured during the semiannual events to confirm that the total depths were consistent with the data from the previous reports.

3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the peristaltic pump tubing to a depth where the pump tubing inlet was within the screened interval. Ample hydraulic head was maintained above the tubing depth to ensure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, whereas the discharge tubing was connected to a YSI 556 water quality flow cell.

4. Monitoring wells were pumped at a rate of approximately 200 milliliters per minute. Flow rate was determined by gauging the time it took to fill a 200-milliliter vial. Water quality parameters were recorded continuously including temperature, pH, DO, ORP, turbidity, and specific conductivity. Turbidity was measured using a Hach 2100Q turbidity meter, whereas concentrations of dissolved Fe^{2+} were measured in the field using a Hach DR900 test kit by Method 8146.

5. The groundwater flow rate was maintained during sample collection. Samples were collected, labeled, and packed in ice until shipment to the laboratory. Chain-of-custody (CoC) forms were filled out and shipped with the samples. Copies of the CoC forms are provided in **Appendix B-1**, along with the raw analytical data packages.

Table 4-3 presents a summary of the final (stabilized) water quality readings for each well from the twenty-fifth event. Based on the twenty-fifth event DO data, slightly aerobic groundwater conditions are prominent in 9 of 11 monitoring wells at SWMU 49 (i.e., DO greater than 1 part per million [ppm]). The DO levels ranged from a low of 0.68 milligram per liter (mg/L) at monitoring well 49MW04 to a high of 7.91 mg/L at monitoring well 48MW2. ORP measurements ranged from a low of 6.8 millivolts (mV) at monitoring well 13MW3 to a high of 235.2 mV at monitoring well 49MW01. Measurements of pH ranged from a low of 6.69 standard units (SU) at monitoring well 13MW4 to a high of 7.71 SU at monitoring well 49MW01. As evidenced in **Table 4-3**, all pH measurements were below 8.0. Measuring the suitability of the groundwater to support microbial species is accomplished through pH readings. Microbial activity tends to be reduced outside of a pH range of 5 to 9, and anaerobic microorganisms are typically sensitive to pH extremes (Interstate Technology and Regulatory Council [ITRC], 1999). Measurements of specific conductivity ranged from a low of 429 microsiemens per centimeter (µS/cm) at monitoring well 49MW01 to a high of 668 µS/cm at monitoring well 13MW2.

4.1.3 Quality Control Samples

Quality control (QC) samples, including one duplicate sample, two trip blanks, and one matrix spike/matrix spike duplicate (MS/MSD), were collected during the twenty-fifth monitoring event.

One duplicate sample was collected during the twenty-fifth monitoring event at monitoring well 13MW4 (duplicate as 13TW4) and was analyzed for the same full suite of compounds as the parent sample. Two trip blanks were collected (one for each day [26 and 28 October 2021] of sampling at SWMU 49). Further, one MS/MSD was collected and analyzed for the same full suite of compounds as the parent sample.

One IDW purge water sample (49IDW) was collected and analyzed for pH, chemical oxygen demand (COD), and total Target Analyte List metals. All collected purge water for all events was taken to the ACD area for storage and deposited in a 55-gallon drum labeled 48/49, with RFAAP providing subsequent disposal.

Results of the quality assurance (QA)/QC samples are presented in the raw analytical data package provided in **Appendix B-1**.

4.2 TWENTY-SIXTH SEMIANNUAL GROUNDWATER SAMPLING

Groundwater elevation measurements and samples were collected from all 15 POC monitoring wells. The twenty-sixth event of groundwater sampling was conducted from 26 through 29 April 2022. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this event are provided in **Figure 4-1**.

4.2.1 Groundwater Elevation Measurements

Water level elevations were collected during each Year Seven semiannual event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-4** provides the measured DTW levels (from the top of the casing) and groundwater elevations amsl collected on 26 April 2022. **Figure 4-3** presents a groundwater elevation contour map developed from the elevation data collected during this monitoring event.

4.2.2 Groundwater Sampling

Groundwater samples were collected from all 15 POC monitoring wells from 26 through 29 April 2022. The twenty-sixth semiannual monitoring samples were tested for the same analytes as the twenty-fifth event, which are presented in **Table 4-1**. In addition, the same MNA indicator parameters were collected in the twenty-sixth event as were collected in the twenty-fifth event:

TOC, dissolved Fe^{2+}, chloride, nitrate, and sulfate. Water quality parameters collected during low-flow sampling included pH, temperature, specific conductivity, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49.

Groundwater samples were collected applying the same method and approach used during the twenty-fifth semiannual monitoring event: specifically, by low-flow peristaltic pumps.

Table 4-5 presents a summary of the final (stabilized) water quality readings for each well from the twenty-sixth event. Based on the twenty-sixth event DO data, aerobic groundwater conditions exist at SWMU 49 (i.e., DO greater than 1 ppm). The DO levels ranged from a low of 1.2 mg/L at monitoring well 48MW06 to a high of 7.22 mg/L at monitoring well 48MW03. ORP measurements ranged from a low of 97.9 mV at monitoring well 49MW04 to a high of 213.6 mV at monitoring well 50MW02. Measurements of pH ranged from a low of 6.64 SU at monitoring well 50MW02 to a high of 8.07 SU at monitoring well 48MW07. Measurements of specific conductivity ranged from a low of 191 µS/cm at monitoring well 48MW07 to a high of 679 µS/cm at monitoring well 50MW02. Copies of the CoC forms are provided in **Appendix B-1**, along with the raw analytical data packages.

4.2.3 Quality Control Samples

QC samples, including two duplicate samples, three trip blanks, and one MS/MSD, were collected during the twenty-sixth semiannual monitoring event.

Two duplicate samples were collected during the twenty-sixth monitoring event at monitoring wells 49MW04 (duplicate as 49TW04) and 50MW02 (duplicate as 50TW02) and were analyzed for the full suite of compounds as the parent sample. Three trip blanks were collected (one for each day [26 through 28 April 2022] of sampling at SWMU 49). Further, two MS/MSDs were collected and analyzed for the same full suite of compounds as the parent sample.

One IDW purge water sample (49IDW) was collected and analyzed for pH, COD, and total metals.

5. CHEMICAL ANALYTICAL RESULTS

5.1 SELECTION OF COMPARISON CRITERIA

The chemical data collected during the Year Seven MNA groundwater monitoring investigation were compared to RGs selected in the approved Draft SWMU 48/49 RFI Report (CB&I, 2014a). **Tables 5-1** through **5-4** present the analytical results and summaries of the twenty-fifth and twenty-sixth semiannual event monitoring data, including number of results that exceeded the RGs, frequency of detection, the minimum and maximum detected concentrations, and the location of the maximum concentration.

5.2 TWENTY-FIFTH SEMIANNUAL GROUNDWATER RESULTS

Eleven groundwater monitoring wells were sampled during this semiannual monitoring event: 13MW2, 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, 48MW06, 49MW01, 49MW02, 49MW04, and 50MW02, whereas one duplicate sample was collected from monitoring well 13TW4 (duplicate as 13TW4). Sample locations are provided in **Figure 4-1**.

Samples were submitted for TCL VOCs and MNA indicator parameter analyses, including dissolved gases (methane, ethane, and ethene) and dissolved iron (Fe). A summary of detected constituents is provided in **Table 5-1**, and a subset of the results, consistent with the reporting in previous SWMU 49 LTM reports, is presented in **Table 5-2**. The CT plume is shown in **Figure 5-1**, and the TCE plume is shown in **Figure 5-2**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Six VOCs were detected in groundwater samples: 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), CT, chloroform, cis-1,2-DCE, and TCE. Nine of the 11 monitoring wells had one or more detections of the VOCs listed above; monitoring wells 49MW02 and 13MW2 did not have any detections of VOCs.

The VOC 1,1,1-TCA was detected at monitoring well 48MW06 at an estimated concentration of 1 µg/L. An RG for 1,1,1-TCA has not been established for SWMU 49; however, the USEPA MCL for 1,1,1-TCA is 200 µg/L (USEPA, 2018).

The VOC 1,1-DCA was detected in two monitoring wells, 48MW06 and 48MW1, at a concentration of 1.1 µg/L (48MW06) and an estimated concentration of 0.65 µg/L (48MW1). An RG for 1,1-DCA has not been established for SWMU 49. There is no USEPA MCL for 1,1-DCA (USEPA, 2018); however, the tapwater regional screening level (RSL) is 2.8 µg/L (USEPA, 2021).

The VOC CT was detected at six monitoring wells: 48MW2, 48MW3, 49MW01, 13MW3, 49MW04, and 50MW02. Three monitoring wells contained CT concentrations that exceeded the RG of 5 µg/L: 48MW2 (24 µg/L), 48MW3 (74 µg/L), and 13MW3 (5.3 µg/L). The range of concentrations detected during this semiannual event went from a low of an estimated value of 0.50 µg/L (49MW04) to a high of 74 µg/L (48MW3). The CT plume is shown in **Figure 5-1**; the size of the area still exceeding the RG of 5 µg/L is estimated at 3.3 acres. The RG exceedance area presented in **Figure 5-1** was estimated based on triangulation of CT concentrations in the wells to establish the area above the RG of 5 µg/L. This methodology was used to estimate the RG exceedance area for all COCs for each semiannual event.

The VOC chloroform was detected in three monitoring wells: 48MW2, 48MW3, and 13MW3. Concentrations ranged from an estimated low of 0.7 µg/L (13TW3) to a high of 22.0 µg/L (48MW3). An RG for chloroform has not been established for SWMU 49; however, the USEPA MCL for chloroform is 80 µg/L (USEPA, 2018).

The VOC cis-1,2-DCE was detected in two monitoring wells, 48MW06 and 48MW1, at a concentration of 2.2 µg/L at 48MW06 and an estimated concentration of 0.71 µg/L at 48MW1. An RG for cis-1,2-DCE has not been established for SWMU 49; however, the USEPA MCL for cis-1,2-DCE is 70 µg/L (USEPA, 2018).

The VOC TCE was detected at seven monitoring wells: 48MW06, 48MW1, 48MW2, 48MW3, 50MW02, 13MW3, and 13MW4 (and field duplicate [FD] 13TW4). Monitoring well 48MW3 contained a concentration of TCE that exceeded the RG of 5 µg/L. The range of concentrations detected during this semiannual event went from an estimated low of 0.89 µg/L (13MW3) to a high of 18.0 µg/L (48MW3). The TCE plume is shown in **Figure 5-2**; the size of the area still exceeding the RG of 5 µg/L is estimated at 0.84 acre.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, dissolved Fe^{2+} and manganese, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

TOC was detected in five monitoring wells at a concentration range of 0.53 (48MW3) to 6.1 µg/L (50MW02). Concentrations of dissolved Fe^{2+} ranged from a low of 0.0 mg/L (non-detect) to a high of 0.28 mg/L (49MW02), whereas dissolved manganese levels ranged from a low of 0.0 mg/L (non-detect) to a high of 1.8 mg/L (49MW02). Chloride concentrations ranged from a low estimated value of 1.6 mg/L (49MW02) to an estimated high of 32 mg/L (13MW2). Detected concentrations of nitrate ranged from an estimated low of 0.22 mg/L (13MW2) to a high of 4 mg/L (48MW3). Sulfate concentrations ranged from an estimated low of 0.88 mg/L (49MW01) to a high of 97 mg/L (13MW3). Methane concentrations ranged from an estimated low of 0.46 mg/L (48MW2) to an estimated high of 0.91 mg/L (49MW02). Ethane and ethene went undetected during this semiannual monitoring event. **Table 5-2** presents the MNA indicator parameters sample results.

5.3 TWENTY-SIXTH SEMIANNUAL GROUNDWATER RESULTS

The twenty-sixth semiannual monitoring event served as the annual event for the Year Seven MNA sampling. As such, all 15 POC monitoring wells were sampled: 13MW2, 13MW3, 13MW4, 13MW5, 48MW1, 48MW2, 48MW3, 48MW06, 48MW07, 49MW01, 49MW02, 49MW3, 49MW04, 49MW5, and 50MW02. Two duplicate samples were collected from monitoring wells 49MW04 (duplicate as 49TW04) and 50MW02 (duplicate as 50TW02). Sample locations are provided in **Figure 4-1**. (Note: Both annual and semiannual wells were sampled during this monitoring event.)

Samples were submitted for TCL VOCs, dissolved gases (methane, ethane, and ethene), and MNA indicator parameter analyses. A summary of detected constituents is provided in **Table 5-3**, and a subset of the results, consistent with the reporting in previous SWMU 49 LTM reports, is presented in **Table 5-4**. The CT plume is shown in **Figure 5-3**, and the TCE plume is shown in **Figure 5-4**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Five VOCs were detected in groundwater samples: 1,1-DCA, CT, chloroform, cis-1,2-DCE, and TCE. Nine monitoring wells had one or more detected concentrations of the VOCs listed above. Monitoring wells 48MW07 (upgradient well), 13MW5, 49MW03, 49MW05, 49MW02, and 13MW2 did not have detected concentrations of VOCs.

The VOC 1,1,1-TCA was not detected in any of the wells.

The VOC 1,1-DCA was detected at one monitoring well, 48MW1, at an estimated concentration of 0.61 µg/L. An RG for 1,1-DCA has not been established for SWMU 49. There is no USEPA MCL for 1,1-DCA (USEPA, 2018); however, the tapwater RSL is 2.8 µg/L (USEPA, 2021).

The VOC CT was detected at six monitoring wells: 48MW2, 48MW3, 49MW01, 50MW02 (and associated FD 50TW02), 13MW3, and 49MW04 (and associated FD 49TW04). Three monitoring wells contained CT concentrations that exceeded the RG of 5 µg/L: 48MW2 (29 µg/L), 48MW3 (75 µg/L), and 13MW3 (6.0 µg/L). These results are similar to those from the twenty-fifth monitoring event. The size of the area still exceeding the RG of 5 µg/L is the same as the twenty-fifth event and is estimated at 3.3 acres. The range of concentrations detected during this sampling event went from a low of an estimated value of 0.70 µg/L (49TW04) to a high of 74 µg/L (13MW3).

Chloroform was detected in three monitoring wells, 48MW2, 48MW3, and 13MW3, at concentrations ranging from a low of 0.10 µg/L (13MW3) to a high of 10.0 µg/L (48MW3). Compared to the twenty-fifth event monitoring results, the detected concentration of chloroform in monitoring well 48MW2 increased slightly, decreased from 22 µg/L to 10 µg/L in monitoring well 48MW3, and was similar in monitoring well 13MW3. An RG for chloroform has not been established for SWMU 49; however, the USEPA MCL for chloroform is 80 µg/L (USEPA, 2018).

The VOC cis-1,2-DCE was detected in two monitoring wells, 48MW06 and 48MW1, at a concentration of 2.0 µg/L and an estimated concentration of 0.73 µg/L, respectively. When compared to the twenty-fifth event monitoring results, concentrations were similar. An RG for cis-1,2-DCE has not been established for SWMU 49; however, the USEPA MCL for cis-1,2-DCE is 70 µg/L (USEPA, 2018).

The VOC TCE was detected at seven monitoring wells: 48MW06, 48MW1, 48MW2, 48MW3, 50MW02, 13MW3, and 13MW4. Monitoring well 48MW3 contained a concentration of TCE that exceeded the RG of 5 µg/L (13 µg/L). The size of the area still exceeding the RG of 5 µg/L is estimated at 1.8 acres, which is an increase from the twenty-fifth event. The range of concentrations detected during this event went from an estimated low value of 0.68 µg/L (13MW4) to a high of 13.0 µg/L (48MW3) (**Figure 5-4**). When compared to the previous event sampling results, concentrations in most wells were similar.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, dissolved Fe^{2+} and manganese, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

TOC was only detected in 1 of the 15 monitoring wells at an estimated value of 0.50 mg/L (48MW06). Concentrations of dissolved Fe^{2+} ranged from a low of 0.01 mg/L to a high of 1.78 mg/L (48MW3). Dissolved manganese levels ranged from a low of 0.10 mg/L to a high of 4.2 mg/L (49MW04). Chloride concentrations ranged from an estimated low of 1.5 mg/L (48TW3) to a high of 11 mg/L (48MW06). Concentrations of nitrate ranged from non-detect to a high of 3.3 mg/L (48MW3). Sulfate concentrations ranged from an estimated low of 3 mg/L (49MW01) to a high of 120 mg/L (13MW3 and 13MW5). Methane was detected in two monitoring wells, 48MW2 and 49MW02, at concentrations of 0.58 µg/L and 2.7 µg/L, respectively. Ethane and ethene went undetected during this semiannual monitoring event. **Table 5-4** presents the MNA indicator parameters sample results.

5.4 YEAR SEVEN SAMPLE RESULTS

This section discusses the results from the Year Seven MNA sampling. Samples collected were analyzed for the full suite of analytical parameters described in **Table 4-1** (TCL VOCs and MNA indicator parameters including dissolved gases [methane, ethane, and ethene] and dissolved Fe^{2+}).

5.4.1 Carbon Tetrachloride

The VOC CT was detected in six monitoring wells during the twenty-fifth and twenty-sixth semiannual monitoring events. CT was detected in monitoring wells 48MW2, 48MW3, 49MW01,

49MW04, 50MW02, and 13MW3 in both semiannual events. The highest concentrations were consistently detected at monitoring wells 48MW2, 48MW3, and 13MW3, with the highest levels (74 µg/L) observed in both Year Seven events at 48MW3. Concentrations detected in these three wells exceeded the RG of 5 µg/L in each semiannual event. In general, the concentrations detected at these three wells were only a slight variable from event to event with no clear increasing or decreasing trend, consistent with Years Two through Seven MNA sampling results. The remaining wells with observed detections were well below the RG and, in general, had concentrations that were relatively steady, with minor fluctuations, throughout the Year Seven MNA sampling. **Figures 5-5** and **5-6** depict the concentrations at these sampling locations throughout Year Seven semiannual sampling. **Figure 5-7** provides a time series plot of CT concentrations dating back to samples collected in 1995.

5.4.2 Trichloroethene

The VOC TCE was detected in seven monitoring wells during both semiannual monitoring events: 48MW06, 48MW1, 48MW2, 48MW3, 50MW02, 13MW3, and 13MW4. The highest concentrations were consistently detected at monitoring well 48MW3. Concentrations detected in monitoring well 48MW3 exceeded the RG of 5 µg/L in both semiannual events (18.0 µg/L and 13.0 µg/L), with no other sample concentrations at other wells exceeding the RG. In general, the concentrations detected in all seven monitoring wells were variable from event to event with no clear increasing or decreasing trend. **Figures 5-5** and **5-6** depict the concentrations at these sampling locations throughout Year Seven of semiannual sampling. **Figure 5-8** provides a time series plot of TCE concentrations dating back to samples collected in 1995.

5.5 LABORATORY ANALYSIS, DATA VALIDATION, AND REPORTING

The Year Seven MNA sampling for SWMU 49 was collected semiannually in October 2021 and April 2022. Groundwater samples were collected in accordance with the Quality Assurance Project Plan (QAPP), revised August 2015. Documentation pertaining to CoC and sample condition was filed in field and laboratory records. A summary of samples and analyses is included in **Table 5-5**. Analytical methods are provided in **Table 5-6**.

The samples were placed into coolers with ice at the time of collection. The CoC forms were completed as the samples were packaged into coolers for transport. Trip blanks, temperature

blanks, and ice were added as required. All coolers were shipped to the main laboratory, CT Laboratories in Baraboo, WI. The trip blanks were packed in the coolers with the VOC and methane/ethane/ethene samples.

The analytical data were reviewed for consistency with the test methods as noted in **Table 5-6** and the project QAPP to ensure that the data set met project data quality objectives and was usable for the purposes of the project. Validation was performed following the National Functional Guidelines for Inorganic Superfund Data Review (USEPA, 2014a), National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2014b), and professional judgment. Any anomalies to the requirements for precision, accuracy, representativeness, completeness, comparability, and sensitivity are discussed below, and the data were flagged where appropriate.

Application of Data Flags

General data quality flagging conventions in **Table 5-7** were used to indicate QC anomalies. Data were flagged, where appropriate, in accordance with the National Functional Guidelines and the project QAPP.

Preservation, Temperature, and Hold Time

All sample preservation requirements were met. Most sample analyses were within holding time. Refer to **Table 5-8** for holding time exceedances.

5.5.1 Precision

Precision was measured from the relative percent difference (RPD) between the parent sample/FD, laboratory duplicates, laboratory control sample (LCS), and the MS/MSD pairs. MS/MSD sample collection and analysis were performed at a frequency of 5% of field samples.

Field Duplicates

FDs were collected at a frequency of 10% of field samples. All RPDs were within control limits. **Table 5-9** lists FD exceedances.

Matrix Spike/Matrix Spike Duplicate Relative Percent Difference

The RPDs for aluminum, calcium, iron, and nickel for sample 49IDW during the October 2021 event exceeded their 20% control limit. The positive and non-detect results for these analytes for the sample were qualified as estimated (J) and estimated non-detect (UJ). **Table 5-10** lists MS/MSD RPD exceedances.

5.5.2 Accuracy

Accuracy was measured from laboratory QC sample percent recoveries, including LCS, MS, MSD, and surrogates. Accuracy was also evaluated by determining whether any deviations to method or laboratory requirements for internal standards, initial calibration verification (ICV), and continuing calibration verification (CCV) recoveries were noted in the case narrative(s).

Laboratory Control Sample/Matrix Spike/Matrix Spike Duplicate Recovery

One LCS was analyzed for each batch of 20 samples or fewer. All LCS recoveries were within control limits. As shown in **Table 5-11**, no LCS exceedances were noted.

MS/MSD analysis was performed at a frequency of 5% of field samples. Most recoveries were within control limits. **Table 5-12** presents MS/MSD recoveries outside control limits. The data for the parent sample were flagged as indicated in the table. If no flag was indicated, the data were not flagged. Data were not flagged in cases where the parent sample concentration was greater than four times the spike concentration.

Parent samples only were qualified.

Post-Digestion Spike Recovery Exceedances

Most recoveries were within control limits. There were no post-digestion spike (PDS) recovery exceedances.

Serial Dilution Percent Difference

Most recoveries were within control limits. **Table 5-13** lists the serial dilution percent difference exceedances.

Surrogates

All surrogate recoveries were within control limits. There were no surrogates that exceeded acceptance criteria.

Internal Standards

There were no internal standards outside control limits.

Calibration Verification

Some calibration results were outside control limits. **Table 5-14** summarizes calibration exceedances.

5.5.3 Representativeness

The samples were collected from locations specified in the approved *SWMU 49 Monitored Natural Attenuation Groundwater Monitoring Work Plan* (Shaw, 2014). Representativeness of the data is considered acceptable.

5.5.4 Comparability

Comparability was acceptable. Standard analytical methods were used. Standard preparatory and analytical methods were applied to the samples across sampling events. In all cases, the detection limits and limits of detection attained were below the specified limits of quantitation (LOQs). All target compounds detected below the LOQs flagged (J) by the laboratory are considered estimated concentrations.

5.5.5 Completeness

Completeness was measured as the number of usable results versus the total number of results. The data set was 100% complete with no omissions or rejections with respect to analysis. The information fulfilled the data quality objectives of this investigation.

5.5.6 Sensitivity

Sensitivity was measured by evaluating whether the LOQ was less than RGs for constituents with RGs and less than the regulatory criteria for those constituents without RGs. All nominal LOQs were below the regulatory criteria.

Additionally, sensitivity was evaluated by determining whether method blank, trip blank, and rinsate blank results were less than the LOQs. Some analytes were detected in some blanks, leading to qualification of sample results.

Blanks (Calibration [Instrument], Method, Trip, and Rinsate)

Calibration blanks were analyzed throughout analytical runs.

One method blank was analyzed with every batch of 20 samples or fewer for each matrix.

One trip blank was included with each cooler for samples to be analyzed for VOCs and dissolved gases (methane, ethane, and ethene).

Table 5-15 presents samples flagged for blank results; none required qualification. Data quality and usability were not affected.

Reporting Limits

Nominal reporting limits, before adjustments for dilutions, were below the regulatory criteria noted in the project QAPP.

5.5.7 Data Usability Summary

In summary, all data were considered usable with the qualifications discussed above. The completeness goals for the project were met. The data were considered of good quality for the project goals, and no J-flagged results affected the overall conclusions as to whether MNA is occurring.

Low MS/MSD (**Table 5-12**) and PDS percent recoveries indicate that the associated results may be biased low for the associated samples.

The RPDs for laboratory duplicate and FD exceedance indicate that the associated results were estimated or non-detected estimated for the associated samples.

This data quality assessment was prepared by Validata Chemical Services, Inc. (Validata). Validata has provided data validation services since 1990 with completion of more than 350 environmental chemistry data validation contracts for all business sectors, including

35 USACE and 252 additional DoD contracts. Validata has been audited by the USEPA Quality Assurance Section and the U.S. Navy Environmental Project Management Group, and was approved as a data validation service by both agencies. Data validation reports are presented in **Appendix B-2**.

Table 5-1 SWMU 49 Summary of Detected Constituents in Twenty-Fifth Semiannual Groundwater Samples

Analyte	Units	RG	No. of RG Exceedances	No. of Detections	No. of Samples[1]	Minimum Concentration	Maximum Concentration	Location of Maximum
VOCs								
1,1,1-Trichloroethane	µg/L	NA	NA	1	12	ND	1.0	48MW06
1,1-Dichloroethane	µg/L	NA	NA	2	12	ND	1.1	48MW06

Notes:

[1] Remedial goals developed in Draft SWMU 48/49 RFI Report (CB&I, 2014a).
Exceedances denoted by **bold font.**
µg/L = micrograms per liter (parts per billion)
Fe^{2+} = ferrous iron
ID = identification
LOD = limit of detection
LOQ = limit of quantitation
mg/L = milligrams per liter (parts per million)
Mn = manganese
MNA = monitored natural attenuation
NA = not applicable; remedial goal not established for analyte at SWMU 49
RFI = RCRA Facility Investigation
SWMU = Solid Waste Management Unit
RCRA = Resource Conservation and Recovery Act
VOC = volatile organic compound

Lab Q = laboratory data qualifiers
Val Q = validation data qualifiers
J = Estimated value.
U = Analyte concentration was not above the detection level.
UJ = Non-detected estimated.

Table 5-3 SWMU 49 Summary of Detected Constituents in Twenty-Sixth Semiannual Groundwater Samples

Table 5-7 Typical Data Qualifiers

Qualifier	Description
R	Rejected: The result is rejected due to deficiencies in the analytical system or the inability to meet quality control (QC) criteria.
M	Matrix effect: The concentration is estimated due to a matrix effect.
J	Estimated: The analyte was positively identified, but the quantitation is an estimate due to discrepancies in meeting certain analyte-specific QC criteria.
J+	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased high, due to discrepancies in meeting certain analyte-specific QC criteria.
J-	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased low, due to discrepancies in meeting certain analyte-specific QC criteria.
B	Blank. The analyte was detected in an associated blank.
U	Undetected: The analyte was analyzed for but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria.

6. MNA EVALUATION OF SWMU 49

This section presents and summarizes the results for the Year Seven MNA sampling. Eleven monitoring wells were sampled in the SWMU 49 study area for two semiannual events (October 2021 and April 2022), whereas four wells were sampled on an annual basis (April 2022 event) during the Year Seven MNA monitoring. Sample results were evaluated to determine whether MNA is continuing to occur at the site.

Consistent with the TCL VOC results from the sampling event in May 2013 and the baseline sampling conducted in January 2015, the highest concentrations of CT were observed in monitoring wells 48MW2 and 48MW3, where the center of the plume is located. Exceedances of the RG for CT were also noted at monitoring well 13MW3 in both events during Year Seven. CT concentrations have hovered around the RG since 2013.

TCE concentrations detected at monitoring well 48MW2, where historically high concentrations had been detected, were below the RG of 5 µg/L in both events. During the Year Seven sampling year, all concentrations of TCE at monitoring well 48MW2 were below the RG of 5 µg/L. Conversely, TCE concentrations in 48MW3 were above the RG in both events of Year Seven.

Based on the Year Seven MNA results, the CT and TCE plumes changed only slightly from sampling event to sampling event (seasonally) (**Figures 5-1** through **5-4**). There were modest changes in the two events with a moderate decrease of TCE at monitoring well 48MW3 in Year Seven from the October 2021 event (18 µg/L) to the April 2022 event (13 µg/L). In general, the CT and TCE plumes were centered on monitoring wells 48MW3/48MW2 and 48MW06/48MW3, respectively. These trends continued throughout the year. The TCE trend continued since Year Two and generally remained undetected at monitoring well 13MW2, except for the nineteenth quarter (0.33 µg/L). In both events during the Year Seven MNA monitoring, detections of CT were found downgradient at monitoring well 13MW3 (ranging from 5.3 µg/L to 6.0 µg/L), which is next to the New River. This concentration range is slightly lower than the Year Six data. As has been the recent trend, TCE was detected downgradient at monitoring wells 13MW3 and 13MW4 (well below the RG).

6.1 FIRST LINE OF EVIDENCE: OCCURRENCE OF CONTAMINANTS

The first line of evidence consists of evaluating contaminant and daughter product concentrations in monitoring wells over time. The VOC CT reduces to form chloroform, and TCE will be reduced to form cis-1,2-DCE, among other by-products. Both CT and TCE attenuate more favorably under anaerobic conditions. Fifteen monitoring wells were included in the MNA monitoring at SWMU 49, which targeted areas with CT and TCE contamination. Historical trends and the results of the Year Seven MNA semiannual groundwater sampling are discussed below, and the CT and TCE data are provided in **Table 6-1**.

6.1.1 Carbon Tetrachloride

There is good correlation of chloroform to CT concentrations for Year Seven monitoring periods. Based on the data, wells with detected concentrations of CT also contained measurable levels of chloroform except for monitoring wells 49MW01, 49MW04, and 50MW02. Based on available data, the presence of chloroform suggests the degradation of CT is occurring at SWMU 49. **Figures 6-1** through **6-4** provide correlation data from the Year Seven MNA sampling.

6.1.2 Trichloroethene

The correlation of cis-1,2-DCE to TCE appears to have improved some over the four quarters of Year Five from that of the Year Three and Year Four MNA results. There is evidence that some correlation exists; however, in wells that contained the highest observed concentrations of TCE (48MW2 and 48MW3), cis-1,2-DCE went undetected in both semiannual events in Year Seven. For both events in Year Seven, MNA cis-1,2-DCE concentrations were above TCE concentrations in monitoring well 48MW06. Based on the available data, a strong correlation of TCE degradation to cis-1,2-DCE cannot yet be determined. **Figures 6-1** through **6-4** provide correlation data from the Year Seven MNA sampling.

6.1.3 Statistical Trends

Mann-Kendall tests were run using the USEPA software package ProUCL (USEPA, 2020). The Mann-Kendall graphs are included as **Appendix C**. Monitoring wells 48MW2 and 48MW3 both displayed high and low outliers for the CT and TCE concentration trends over the past 5 years.

Time series plots were created with and without those initial and/or final sampling data points to compare how the concentration trends would be affected by the varying results.

At monitoring well 48MW2, both CT and TCE experienced decreasing trends, regardless of outlying results or concentration variability. This trend is comparable to all other well sampling during Year Seven, which also display decreasing trends for CT and TCE concentrations. At monitoring well 48MW3, CT has a slight decreasing trend with the initial outlier removed and a steeply decreasing trend with the outlier data from the initial sampling included. At monitoring well 48MW3, TCE has a decreasing trend with all data. Overall, there is a decreasing trend for CT and TCE across the site except for monitoring well 13MW3 (CT and TCE), which is directly downgradient from the highest concentrations in the contaminant plume; therefore, there is CT and TCE migration from the center of the plume to this downgradient location.

6.2 SECOND LINE OF EVIDENCE: GEOCHEMICAL CONDITIONS

Geochemical data are available for both semiannual groundwater monitoring events at SWMU 49. Field parameters (DO, ORP, pH, temperature, and specific conductivity) were collected for both events as part of the low-flow sampling procedures. Laboratory analysis for nitrate, sulfate, and TOC were conducted for both groundwater monitoring events at SWMU 49. These geochemical data are discussed regarding the potential for biodegradation in the groundwater at SWMU 49.

The degradation of CT primarily occurs under anaerobic conditions, either through denitrification, iron reduction, sulfate reduction, or methanogenesis. The environmental degradation of TCE primarily occurs under anaerobic conditions that facilitate reductive chlorination, whereas natural degradation under aerobic oxidizing conditions has been documented but is much less likely to occur. Historical trends and the results of the Year Seven MNA semiannual groundwater sampling are discussed below, and the data are provided in Section 4 tables.

Much of the discussion that follows uses the comparison values provided by USEPA in its *Technical Protocol for Evaluating Natural Attenuation of Chlorinated Solvents in Ground Water* (USEPA, 1998).

6.2.1 Dissolved Oxygen

The preferred terminal electron acceptor during aerobic microbial respiration is oxygen, and DO is measured to determine whether the groundwater is under aerobic or anaerobic conditions. Average DO values less than 1 mg/L are tolerable of anaerobic microbial activities. DO levels during the two semiannual monitoring events (October 2021 and April 2022) of Year Seven ranged between 0.68 mg/L and 7.91 mg/L for the October 2021 event and between 1.2 mg/L and 7.22 mg/L for the April 2022 event, indicating aerobic conditions were generally present at the site.

6.2.2 Oxidation-Reduction Potential

ORP values indicate the groundwater's reductive potential and are used to confirm the DO measurements in groundwater. ORP values less than +50 mV typically correspond to mildly reducing, anaerobic conditions, whereas ORP values less than -200 mV correspond to highly reducing, anaerobic conditions.

ORP levels recorded during the Year Seven MNA sampling ranged from 6.8 mV to 235.2 mV for the October 2021 event and from 97.9 mV to 213.6 mV for the April 2022 event, indicating aerobic conditions were present at the site. Aerobic conditions remain most prevalent. Further, with a few minor exceptions, the ORP values and DO readings for both events showed a clear correlation whereby ORP values demonstrating aerobic conditions were confirmed with DO readings.

6.2.3 pH

The pH for optimum microbial activity ranges from 5 SU to 9 SU. Microbial activity may decrease at lower pH values. All pH measurements during Year Seven ranged between 6.64 SU and 8.07 SU, within this optimal pH range. In general, the pH environment at SWMU 49 is suitable for microbial activity.

6.2.4 Nitrate

Following oxygen, microorganisms preferentially use nitrate as a terminal electron acceptor. Depressed nitrate concentrations may indicate nitrate-reducing conditions that promote the degradation of CT forming breakdown by-products. Nitrate levels during Year Seven of MNA sampling were generally low (a calculated average of all measurements is less than 1 mg/L), with

concentrations ranging from 0.22 mg/L to 4.0 mg/L, very similar to Years One through Six of MNA sampling. The highest levels of nitrate were observed at monitoring well 48MW3 with concentrations of 3.3 mg/L (October 2021 event) and 4.0 mg/L (April 2022 event).

6.2.5 Ferrous Iron

Ferric iron is reduced to soluble Fe^{2+} (ferrous iron) in the groundwater where iron-reducing bacteria facilitate activity. An increase in Fe^{2+} concentrations is indicative of iron-reducing conditions and can be used to determine the potential for contaminant precipitation or coprecipitation and for geochemical modeling. Biological reduction of CT is favored in iron-reducing conditions; therefore, elevated levels of Fe^{2+} are an indicator of favorable groundwater conditions. Fe^{2+} concentrations for all wells during Year Seven of MNA monitoring ranged between 0.0 mg/L (non-detect) and 0.28 mg/L for October 2021 and between 0.01 mg/L and 1.78 mg/L for April 2022, indicating that iron-reducing conditions remain low but were higher than Year Six.

6.2.6 Sulfate

After DO and nitrate have been depleted in the microbiological treatment zone, sulfate may be used as a terminal electron acceptor for anaerobic biodegradation. This process is termed “sulfate reduction” and results in the production of sulfide. At higher concentrations, sulfate (and nitrate) may compete with the reductive pathway. Relative amounts of sulfate provide additional lines of evidence of reducing conditions in the aquifer and provide data on changing aquifer conditions. However, reductive dechlorination still occurs in plumes with high concentrations of sulfate (USEPA, 1998). Sulfate concentrations were measured in the groundwater during each of the Year Seven MNA sampling events and were found to range between 0.88 mg/L and 120 mg/L, very similar to the MNA sampling results from Years Two through Six.

6.2.7 Total Organic Carbon

TOC concentrations greater than 20 mg/L are considered adequate to support microbial activity. For the Year Seven MNA monitoring, TOC concentrations ranged from 0.00 mg/L (non-detect) to 6.1 mg/L, suggesting a still unfavorable environment. TOC concentrations during the Year One MNA sampling ranged from 0.0 mg/L (non-detect) to 34 mg/L. TOC concentrations during the Year Two MNA sampling ranged from 0.0 mg/L (non-detect) to 6.0 mg/L, a notable decrease in

TOC concentrations from Year One. TOC concentrations recorded during Year Three monitoring, however, increased from the Year Two high of 6.0 mg/L to 13 mg/L. TOC concentrations during Year Four ranged from 0.00 mg/L (non-detect) to 3.7 mg/L. TOC concentrations in Year Five ranged from 0.00 mg/L (non-detect) to 5.2 mg/L, whereas concentrations ranged from 0.00 mg/L (non-detect) to 2.7 mg/L for Year Six.

6.2.8 Specific Conductivity

Specific conductivity is the indirect measure of the presence of dissolved solids such as chloride, nitrate, sulfate, and Fe, all degradation by-products. **Figure 6-5** provides a time series plot of CT and chloroform concentrations relative to specific conductivity readings for monitoring wells 48MW2 and 48MW3 for Years One through Seven. **Figure 6-6** provides a time series plot of TCE and cis-1,2-DCE concentrations relative to specific conductivity readings for monitoring wells 48MW2 and 48MW3 for Years One through Seven. As with MNA Years Two through Six results, data suggest that TCE and CT contaminants are biodegrading, and more dissolved inorganic ions (such as chlorides, nitrates, sulfates, and Fe) are creating the electrical current witnessed in the specific conductivity readings. Data also suggest that organic compounds do not carry current and, therefore, have almost no conductivity (USACE, 1999). No direct trend in specific conductivity from Years One through Seven is evident.

Figures 6-7 and **6-8** provide time series plots of MNA indicators sulfate, nitrate, chloride, TOC, ethene, and methane in source monitoring wells 48MW2 and 48MW3 for Years One through Seven. Sulfate concentrations are trending slightly lower in monitoring well 48MW2 but had a large increase in monitoring well 48MW3 in Year Seven. Nitrate concentrations remain relatively stable in both monitoring wells 48MW2 and 48MW3. Chloride concentrations in both monitoring wells appear to have had only minor fluctuations over time, whereas TOC concentrations continue to fluctuate slightly. Methane concentrations have shown wide fluctuations in monitoring well 48MW2 over the past 3 years.

Figure 6-9 provides a time series plot of water quality parameters (DO, Fe, and ORP) in monitoring wells 48MW2 and 48MW3 for Years One through Seven. The time series plot shows that the individual trends for DO, Fe, and ORP are relatively consistent in monitoring wells

48MW2 and 48MW3 except for one event in 2020 due to a large increase in DO in monitoring well 48MW2.

Monitoring wells 13MW2, 50MW02, and 48MW3 appear to carry more of the dissolved solids, with high conductivity readings ranging from 668 microsiemens per centimeter (µS/cm) to 676 µS/cm, 603 µS/cm to 679 µS/cm, and 629 µS/cm to 678 µS/cm, respectively. Biodegradation consumes sulfate and nitrate and produces alkalinity. Chloride is the ion that is formed during dechlorination that takes place in an anaerobic reduction zone. Chloride concentrations are fluctuating among all wells.

Monitoring well 48MW2 maintained aerobic conditions during both events of Year Seven monitoring. Chloride concentrations are impacted by more aerobic conditions and would be increasing; however, chloride concentrations are generally stable. Nitrate concentrations appear to be stable at monitoring well 48MW2. Ethane and ethene went undetected in both events at monitoring well 48MW2.

7. SUMMARY AND CONCLUSIONS

Eleven groundwater monitoring wells were sampled on a semiannual (October 2021 and April 2022 events) basis during the Year Seven MNA monitoring at SWMU 49, and four more were sampled on an annual basis (April 2022 event). The two semiannual events of sample data suggest that CT and TCE concentrations are increasing in some wells and decreasing in others, as has been shown historically. CT and TCE remain in exceedance of the RGs. The CT contaminant plume remains centered around monitoring wells 48MW2 and 48MW3, although detections and RG exceedances were observed downgradient along the New River at monitoring well 13MW3 during both events, with a slightly increasing concentration observed. TCE was detected in both events at monitoring wells 48MW06, 48MW1 (located adjacent to 48MW06), 48MW2, 48MW3, and 50MW02, with both detections at 48MW3 above the RG. Further, TCE was detected in both events at monitoring wells 13MW3 and 13MW4, which are located downgradient and adjacent to the New River. Concentrations at these two downgradient wells were below the RG for TCE.

Based on the presence of chloroform in wells where CT was observed, it appears that VOC is continuing to degrade. The data suggest that MNA processes may still be decreasing mass; however, CT concentrations have been variable but generally stable for the past 3 years in monitoring wells 48MW3 and 48MW2. The data suggest that the correlation of cis-1,2-DCE to TCE is not as prevalent as an indicator of degradation. TCE concentrations decreased in Year Seven compared to Year Six in monitoring well 48MW3 and have been slightly variable but stable in other wells over the last 3 years.

In summary, the following conclusions and recommendations are made regarding the potential for MNA in contaminated groundwater at SWMU 49:

- The presence of chloroform suggests that degradation is occurring, which may be aiding in removing CT mass in the groundwater.
- The breakdown product, cis-1,2-DCE, is present at the site, although no substantive correlation continues to exist with TCE. TCE concentrations have decreased at monitoring well 48MW3 from Year Six to Year Seven but remained relatively stable at monitoring well 48MW2.

- Geochemical parameters also indicate that groundwater conditions are currently aerobic (based on DO and ORP levels) and that pH and TOC levels are adequate to promote microbial degradation. Overall, Fe^{2+}, nitrate, and sulfate concentrations do not appear to favor conditions to support degradation. However, conditions still appear to be trending toward a favorable environment for microbial degradation.

- Based on the MNA results presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015), other MNA processes including sorption, dilution, dispersion, and chemical stabilization are occurring in groundwater at the SWMU 49 study area. Conditions appear favorable that these processes will not significantly change or diminish and will continue to contribute to attenuation of the contaminants at SWMU 49.

- Because the groundwater flow pattern is consistent with the historical pattern, the monitoring well network appears adequate to monitor MNA at SWMU 49.

- Based on the consistency of the data, it is recommended that sampling on a semiannual basis at the 15 monitoring well locations continue.

ANALYTICAL RESULTS FOR:

ANTHONY PACE
WESTON SOLUTIONS, INC.
2 EATON STREET
SUITE 603
HAMPTON, VA 23669

PROJECT SITE:	RFAAP SWMU-49; RADFORD, VA
DOD CONTRACT #:	
PROJECT #:	
SDG:	***165461***
FOLDERS:	165461, 165487, 165524
PREPARED:	December 3, 2021
TOTAL # OF PAGES:	1199

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: Weston Solutions
Project: RFAAP SWMU-49, Radford, VA
Sample Receipt Dates: 10/27/2021, 10/28/2021, 10/29/2021
SDG #: *165461* (Folder #'s 165461, 165487, 165524)

Fourteen water samples were received and analyzed for a variety of parameters, including: VOCs, Dissolved Gases, Metals, pH, COD, Anions, and TOC. Two Trip Blanks were included with the VOCs. The assigned sample ID number, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. A breakdown of sample receipt information can be found on the Sample Condition Report located in the last section of the data package and any exceptions are noted below. The analyses were performed following DOD QSM 5.3 requirements.

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Sample Analysis and Quality Control

Volatile Analysis:

The samples were analyzed using US EPA Methods 8260C (VOC) and RSK-175 (Dissolved Gases). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8260 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1's were either not detected or did not meet identification criteria so they were reported as non-detects.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

VOC (8260C) Water Analysis

Analytical Run # 196904

CCV1 (analyzed 11/01/2021 @ 09:08 on VMS3) had a low recovery outside of specified criteria for 1,4-dioxane. This compound was qualified with a "Z" flag in the associated samples.

Dissolved Gases (RSK-175) Analysis

Analytical Run # 196980 (Methane, Ethene, Ethane)

All analytical results for this run met the method/project specified quality control criteria.

Metals Analysis:

The samples were analyzed using US EPA Methods 6010C (ICP) and 7470A (Hg). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

ICP Metals (6010C) Water Analysis

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Analytical Run # 196999

Magnesium was detected in the Method Blank (MB) greater than the Method Detection Limit (MDL) but less than ½ the Reporting Limit (RL). The sample was reported and not qualified because the MB result was less than 1/10th of the sample result.

The Duplicate (DUP) for sample # 1067793 was not applicable for antimony, arsenic, beryllium, cadmium, calcium, chromium, cobalt, copper, lead, nickel, selenium, silver, thallium, vanadium, and zinc because the parent sample results were less than five times the Limit of Quantitation (LOQ). A Matrix Spike Duplicate (MSD) was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

The DUP for sample # 1067793 was not acceptable for aluminum and iron because the results exceeded the Relative Percent Difference (RPD) limit. The parent sample was reported and qualified with a "Y" flag for the failing elements.

The Matrix Spike (MS) and MSD for sample # 1067793 had recoveries outside the specified limits for aluminum, calcium, iron, manganese, silver, and thallium. A Serial Dilution (L) was analyzed and was not applicable for iron, silver, and thallium because the parent sample raw results were less than 50 times the LOQ. The L was not acceptable for calcium because the result exceeded the RPD limit. A Post Digestion Spike (PDS) was analyzed and was unacceptable for silver. The parent sample was reported and qualified with an "M" flag for the failing element.

ICP Sodium & Potassium (6010C) Water Analysis

Analytical Run # 197000

The DUP for sample # 1067793 was not applicable for sodium and potassium because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7470A) Water Analysis

Analytical Run # 197150

The sample QC was performed on a sample from SDG # 165486.

All analytical results for this run met the method/project specified quality control criteria.

Inorganic Analysis:

The samples were analyzed using US EPA Methods 9060A (TOC), 9040C (pH), 410.4 (COD) and 9056A (Anions). All samples were analyzed within the holding time unless noted below. The following summaries of quality control procedures are included:

Duplicate Analysis Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Anions (9056A) Water Analysis

Analytical Run # 196851

The MSD for sample # 1066469 had a low recovery for sulfate. The parent sample result for this analyte was qualified with an "M" flag.

Analytical Run # 196892

The MS/MSD analysis for this run was performed on a sample from a different SDG (SDG # 165486).

Analytical Run # 196929

All analytical results for this run met the method/project specified quality control criteria.

COD (410.4) Water Analysis

Analytical Run # 197021

The MS/MSD analysis for this run was performed on a sample from a different SDG (SDG # 165486).

pH (9040C) Water Analysis

Analytical Run # 196942

All analytical results for these runs met the method/project specified quality control criteria.

TOC (9060A) Water Analysis

Analytical Run # 197155

All analytical results for this run met the method/project specified quality control criteria.

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

FVO4-01 Data Review Checklist

FORM #: FVO4-01
Rev. #: 2.2
Effective Date: 08/05/19

INDEPENDENT DATA REVIEW CHECKLIST			Method: GCMS (EPA SW-846 8260C)					
Analysis Date	**LIMS Run #(s):**	**Analyst/Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved?**			**Instrument**
					Yes	No		
11/01/2021	196957 196954 196904	DGS	RLD	11/03/2021	Yes			VMS3

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	
I. BFB Tune Check						
Was a BFB tune check analyzed with acceptable results?	Relative abundance criteria met?	Yes		Yes		
II. Initial Calibration Verification (ICV)						
Was initial calibration performed using a minimum of five standard concentration levels (minimum of 6 levels for quadratic curves)?	Lowest standard at or below RL?	Yes		Yes		
Were the Average Relative Response Factors (ARRF) acceptable?	ARRF<or= specified limits (<15%D.)see SOP)	Yes		Yes		
Was a second-source ICV(s) analyzed (for Quadratic Curve)?	Required before sample analyses.	Yes		Yes		
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific	Yes		Yes		
Was Initial Calibration Blank (ICB) analyzed?	Required before sample analyses.	Yes		Yes		
Were the ICB results for all target analytes less than the limit of detection (LOD).	<LOD or < project/program specific limits		No		No	
III. Continuing Calibration Verification (CCV)						
Was an acceptable BFB tune check run at the beginning of every twelve hour shift?	Relative abundance criteria met?	Yes		Yes		
Was a CCV analyzed after every 12 hour tune check?	Required before sample analyses.	Yes		Yes		
Was a second CCV (CCV2) for compounds calibrated using quadratic curves analyzed after every 12 hour tune check?	Required before analyses of WI samples (above the inflection point of the curve).					
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific		No		No	Affected compounds were Z flagged
If necessary, were the results for outlying compounds qualified?		Yes		Yes		

IV. Blanks						
Was a Method Blank (MB) analyzed prior to analysis of samples?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MB results for all target analytes less than the limit of detection (LOD)?	*All target analytes <LOD or < project/program specific limits (<1/2 RL for DoD-QSM)	Yes		Yes		
If analytes were detected in the MB with no associated positives in the samples, no further action is needed. If the analyte detects in the MB were greater than the acceptance criteria and there were detects in the samples, was the data qualified.?						
V. Laboratory Control Spike (LCS)						
Was a LCS (and LCSD if needed) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the LCS (LCSD) recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.	Yes		Yes		
If applicable, were associated sample detects (and non-detects for low recoveries) qualified?						
Is the relative percent difference (RPD) for each analyte between the LCS and LSCD (if applicable) acceptable?	Default 20%, or see internally generated limits, or client specific limits.	Yes		Yes		
VI. Matrix Spike/Matrix Spike Duplicate (MS/MSD)						
Was a Martrix Spike (MS) and a Matrix Spike Duplicate (MSD) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MS/MSD recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.	Yes		Yes		
Is the relative percent difference (RPD) for each analyte between the MS and MSD acceptable?	Default 20%, or see internally generated limits, or client specific limits.	Yes		Yes		
VII. Sample Analyses						
Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		
Were surrogate recoveries for all samples and QC within acceptance criteria?	Default 70-130%, or see internally generated program limits, or client specified limits.	Yes		Yes		
If possible, were the affected samples reanalyzed?						
**Were reported sample results with failing surrogate recoveries qualified?						
Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed? If not qualify (X).	Target upper middle range of calibration curve.					
Did all samples meet hold time and preservation criteria as defined by method/program?	H2O sample: pH < 2 = 14 days, pH >2 = 7 days. Soil samples: 14 days (other criteria may apply)	Yes		Yes		
Were all samples and QC injected within 12 hours of BFB tune check?		Yes		Yes		
Were internal standard recoveries acceptable relevant to associated ICAL?	Response = -50 to +200%; Ret. time = +/- 30 sec.	Yes		Yes		

VIII. Records and Reporting						
Is sequence file / injection log present in the data package?		Yes		Yes		
Were all data, calculations, and values verified in LIMS (including removal of non-detections) upon completion of data capture?		Yes		Yes		
Were manual integrations performed correctly?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms.	Yes		Yes		
Was the rational for the manual integration verified?		Yes		Yes		
Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		

ᵏNon-Applicable Yes/No Cells Are Left Blank*

FVO1-01 Data Review Checklist

	FVO1-01 Method: Dissolved Gases (EPA SW-846 8015 / RSK 175 Modified)					
LIMS Run #(s)	**Analysis Date (s)**	**Analyst / Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved? (Yes or No)**	**Instrument**
196980	11/01/2021	KMT	RLD	11/02/2021	Yes	PVOC4

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments**
1. INITIAL CALIBRATION (ICAL)		**Yes**	**No**	**Yes**	**No**	(Indicate reference to an attachment if necessary)
a. Was the initial calibration performed using a minimum of five concentration levels?	Lowest standard at or below RL	Yes		Yes		
b. For each analyte/component is the variation between calibration response factors for all concentration levels <20% RSD or is $r^2 \geq .99$ or $r \geq .995$ for the regression line?	RSD <20% or $r^2 \geq .99$ or $r \geq .995$ or program/project specific	Yes		Yes		
c. Are the identification and date of the ICAL listed on the printout (or PDF) of the analytical run and in the method file?	ID# and date of ICAL listed	Yes		Yes		
d. Was an Initial Calibration Verification (ICV) analyzed after the ICAL?	Analyzed prior to sample analyses	Yes		Yes		
e. Were the recoveries for each analyte in the ICV within required limits?	Recoveries 85 - 115% or within program/project specific limits	Yes		Yes		
f. Was an Initial Calibration Blank (ICB) analyzed?		Yes		Yes		
g. Were the ICB results for all target analytes/components less than the reporting limit (RL)?	<RL or < program/project specific	Yes		Yes		
2. CONTINUING CALIBRATION VERIFICATION (CCV)						
a . Was a CCV analyzed at the beginning and end of a sequential analysis run, as well as after ever 10 samples?		Yes		Yes		
b. Were the recoveries for each analyte/component in the CCV within acceptance criteria?	Recoveries 85 - 115% or within program/project specific limits	Yes		Yes		
3. METHOD BLANKS (MB)						
a. Was a method blank (MB) analyzed?	1 / 20 or program/project specific	Yes		Yes		
b. Were the MB results for all analytes/components less than reporting limit?	All target analytes/components <RL or within program/project specific limits (DoD-QSM: <1/2 the RL)	Yes		Yes		
4. LABORATORY CONTROL SAMPLE (LCS)						
a. Was a LCS analyzed at the required frequency?	1 / 20 or program/project specific	Yes		Yes		
b. Were LCS recoveries for all analytes within the acceptance criteria?	Default = 70-130%, or within In-house generated or program/project specific limits	Yes		Yes		
c. If LCS recoveries exceed acceptance criteria, was the LCS reanalyzed in an effort to eliminate the possibility of a preparation error?		Yes		Yes		

5. MATRIX SPIKE (MS)/ MATRIX SPIKE DUPLICATES (MSD) and DUPLICATE						
a. Was a MS, MSD, and/or Duplicate (if valid) Vial analyzed with each batch of 20 samples (or program-specified frequency)?	1 / 20 or program/project specific frequency (QSM samples, duplicate only valid if sample result ≥ 5x the LOQ)	Yes		Yes		
b. Were MS/MSD recoveries for all analytes within acceptance criteria?	Default =70-130%, or within In-house generated or program/project specific limits	Yes		Yes		
6. PRECISION						
a. Is the relative percent difference (RPD) for each analyte between duplicate QC samples (i.e. parent sample / Duplicate vial), or for each MS/MSD within the acceptance criteria?	Default = 20 % RPD, or within In-house generated or program/project specific limits	Yes		Yes		
7. SAMPLES (INCLUDING BLANKS, STANDARDS, AND QC SAMPLES)						
a. Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		
b. Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed or reanalyzed using a smaller sample aliquot? Affected analyte detects should remain above the limit of quantitation (LOQ) after reanalysis.		Yes		Yes		
c. Was the correct ambient temperature recorded on sample spreadsheets?		Yes		Yes		
d. Were all samples adequately preserved and analyzed within holding time?	CO_2 samples received unpreserved (analyze within 7 days or program/project specific) Methane, Ethene, Ethane samples received preserved to <2 (analyze within 14 days or program/project specific)	Yes		Yes		
8. RECORDS AND REPORTING						
a. Is a sequence run file present in the raw data file?		Yes		Yes		
b. Is the data initialed and dated by analyst?	Analysis Run sheet is initialed & dated by the analyst processing the raw data.	Yes		Yes		
c. Do all values, units, etc. listed match the raw data and associated calculations and records?		Yes		Yes		
e. Has the data been electronically transferred to the LIMS and were the applicable qualifiers assigned?		Yes		Yes		
f. Were manual integrations addressed properly and were the audit trails turned on (where applicable)?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms. Audit trail must be on (if available).	Yes		Yes		
g. Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier in LIMS and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		

* Non-Applicable Yes/No Cells Are Left Blank*

Data Review Checklist

	Method: Anions by Ion Chromatography 300.0/9056	Independent Data Review Checklist	Instrument: Aquion - System 4

LIMS Run #(s)	Analysis Date	Analyst/Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes/No)
196851 196852	10/27/2021	TMG	RLD	10/29/2021	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples analyzed within hold time?	28 days for Cl, F, SO_4;14 days for preserved NO_2+NO_3; 48 hours for O.Phos, and unpreserved NO_2 and NO_3	Yes		Yes		
2. Was the calibration performed using the required number of standards?	Minimum three plus a blank	Yes		Yes		
3. Is the standard prep log number noted on the analytical report bench sheet?	---	Yes		Yes		
4. Was the correlation coefficient acceptable?	≥ .995	Yes		Yes		
5. Were the ICV and ICB run immediately after the calibration check standard?	---	Yes		Yes		
6. Was the ICV recovery acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
7. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
8. Were the CCV's and the CCB's analyzed at the required frequency?	1 / 10 samples or contract/program specific	Yes		Yes		
9. Were the CCV recoveries acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
10. Were the CCB results acceptable?	< LOD or program/project specific	Yes		Yes		
11. Was the MB analyzed at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
12. Were the MB results acceptable?	< LOD or contract/program specific	Yes		Yes		

13. Was a LCS run at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
14. Was the LCS recovery acceptable?	Within in-house or contract/program specific limits	Yes		Yes		
15. Was the LCS used before the indicated expiration date?	---	Yes		Yes		
16. Were the MS and MSD (when required) prepared at the required frequency?	1 per 20 samples per matrix or contract/program specific	Yes		Yes		
17. Were the MS and MSD (when required) recoveries acceptable?	Within In-house or contract/program specific limits		No		No	Affected sample results were "M" flagged
18. Was the RPD between the MS and MSD (when required) acceptable?	Within in house or contract/program specific limits	Yes		Yes		
19. Was a sample duplicate prepared at the required frequency?	Contract/program specific or 1 per 20 samples (1 / 10 for SDWA samples)	Yes		Yes		
20. Was the duplicate within precision limits?	Within in-house or contract/program specific limits	Yes		Yes		
21. Were all chromatograms checked to ensure accurate peak identification?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes		
23. Were all samples having analytes detected in amounts exceeding the calibration range diluted, reanalyzed and DF applied to the final results?	---	Yes		Yes		
24. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

Data Review Checklist

	Method: Anions by Ion Chromatography 300.0/9056	Independent Data Review Checklist	Instrument: Aquion - System 4

LIMS Run #(s)	Analysis Date	Analyst/Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes/No)
196891 196892	10/28/2021	TMG	RLD	10/29/2021	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples analyzed within hold time?	28 days for Cl, F, SO_4;14 days for preserved NO_2+NO_3; 48 hours for O.Phos, and unpreserved NO_2 and NO_3	Yes		Yes		
2. Was the calibration performed using the required number of standards?	Minimum three plus a blank	Yes		Yes		
3. Is the standard prep log number noted on the analytical report bench sheet?	---	Yes		Yes		
4. Was the correlation coefficient acceptable?	≥ .995	Yes		Yes		
5. Were the ICV and ICB run immediately after the calibration check standard?	---	Yes		Yes		
6. Was the ICV recovery acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
7. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
8. Were the CCV's and the CCB's analyzed at the required frequency?	1 / 10 samples or contract/program specific	Yes		Yes		
9. Were the CCV recoveries acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
10. Were the CCB results acceptable?	< LOD or program/project specific	Yes		Yes		
11. Was the MB analyzed at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
12. Were the MB results acceptable?	< LOD or contract/program specific	Yes		Yes		

13. Was a LCS run at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
14. Was the LCS recovery acceptable?	Within in-house or contract/program specific limits	Yes		Yes		
15. Was the LCS used before the indicated expiration date?	---	Yes		Yes		
16. Were the MS and MSD (when required) prepared at the required frequency?	1 per 20 samples per matrix or contract/program specific	Yes		Yes		
17. Were the MS and MSD (when required) recoveries acceptable?	Within In-house or contract/program specific limits		No		No	Affected sample results were "M" flagged
18. Was the RPD between the MS and MSD (when required) acceptable?	Within in house or contract/program specific limits	Yes		Yes		
19. Was a sample duplicate prepared at the required frequency?	Contract/program specific or 1 per 20 samples (1 / 10 for SDWA samples)	Yes		Yes		
20. Was the duplicate within precision limits?	Within in-house or contract/program specific limits	Yes		Yes		
21. Were all chromatograms checked to ensure accurate peak identification?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes		
23. Were all samples having analytes detected in amounts exceeding the calibration range diluted, reanalyzed and DF applied to the final results?	---	Yes		Yes		
24. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

Data Review Checklist

	Method: Anions by Ion Chromatography 300.0/9056	Independent Data Review Checklist	Instrument: Aquion - System 4

LIMS Run #(s)	Analysis Date	Analyst/Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes/No)
196929 196934	10/29/2021	TMG	RLD	11/01/2021	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples analyzed within hold time?	28 days for Cl, F, SO_4;14 days for preserved NO_2+NO_3; 48 hours for O.Phos, and unpreserved NO_2 and NO_3	Yes		Yes		
2. Was the calibration performed using the required number of standards?	Minimum three plus a blank	Yes		Yes		
3. Is the standard prep log number noted on the analytical report bench sheet?	---	Yes		Yes		
4. Was the correlation coefficient acceptable?	≥ .995	Yes		Yes		
5. Were the ICV and ICB run immediately after the calibration check standard?	---	Yes		Yes		
6. Was the ICV recovery acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
7. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
8. Were the CCV's and the CCB's analyzed at the required frequency?	1 / 10 samples or contract/program specific	Yes		Yes		
9. Were the CCV recoveries acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
10. Were the CCB results acceptable?	< LOD or program/project specific	Yes		Yes		
11. Was the MB analyzed at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
12. Were the MB results acceptable?	< LOD or contract/program specific	Yes		Yes		

13. Was a LCS run at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
14. Was the LCS recovery acceptable?	Within in-house or contract/program specific limits	Yes		Yes		
15. Was the LCS used before the indicated expiration date?	---	Yes		Yes		
16. Were the MS and MSD (when required) prepared at the required frequency?	1 per 20 samples per matrix or contract/program specific	Yes		Yes		
17. Were the MS and MSD (when required) recoveries acceptable?	Within In-house or contract/program specific limits	Yes		Yes		
18. Was the RPD between the MS and MSD (when required) acceptable?	Within in house or contract/program specific limits	Yes		Yes		
19. Was a sample duplicate prepared at the required frequency?	Contract/program specific or 1 per 20 samples (1 / 10 for SDWA samples)	Yes		Yes		
20. Was the duplicate within precision limits?	Within in-house or contract/program specific limits	Yes		Yes		
21. Were all chromatograms checked to ensure accurate peak identification?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes		
23. Were all samples having analytes detected in amounts exceeding the calibration range diluted, reanalyzed and DF applied to the final results?	---	Yes		Yes		
24. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

COD Data Validation Checklist

		Method: Chemical Oxygen Demand EPA 410.4			
LIMS Run #(s)	**Analysis Date**	**Analyst / Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved? (Yes or No)**
196967, 197021	11/3,5/2021	RLB			

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question.
Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments:**
		Yes	No	Yes	No	(indicate reference to an attachment if necessary)
1. Does a digestion sheet accompany the data package?	---	Yes				
2. Does the digestion sheet include all reagent and standard prep log numbers?	---	Yes				
3. Was a passing calibration test applied to sample analysis?	≥0.995	Yes				
4. Was a passing ICV analyzed immediately after the calibration?	90-110%	Yes				
5. Was a passing ICB analyzed immediately after the ICV?	< |LOD| or client/project specific	Yes				
6. Were CCVs and CCB analyzed at the required frequency?	1 per 10 samples	Yes				
7. Did analyzed CCVs meet the required acceptance criteria?	90-110%	Yes				
8. Did analyzed CCBs meet the acceptance criteria?	< |LOD| or client/project specific	Yes				
9. Was a Method Blank prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes				
10. Was the method blank within acceptance criteria?	< |LOD| or client/project specific	Yes				
11. Was an LCS prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes				
12. Did the LCS meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits	Yes				
13. Was an MS and MSD prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	Yes				
14. Did the MS/ MSD's meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits		No			M flagged affected sample.

15. Did the MS/MSD's meet the RPD criteria?	Within in-house or contract/program specific limits	Yes				
16. Was a Duplicate prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	NA				
17. Did the Duplicate meet the RPD criteria?	Within in-house or contract/program specific limits	NA				
18. Were the samples digested within hold time?	28 days	Yes				
19. Was the max temperature(s) for reactor(s) documented?	---	Yes				
20. Was the method specifed temperature reached?		Yes				
21. Were reagents/standards used before expiration date?	---	Yes				
22. Are all samples on the job lists accounted for?	---	Yes

FWC39-01 Data Review Checklist

	Method: Total Organic Carbon Method 415.1/9060	Independent Data Review Checklist	Instrument: TOCW

LIMS Run #(s)	Analysis Date	Analyst / Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes or No)
197155, 197156	11/4,5/2021	KMT	RLD	11/10/2021	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples preserved prior to analysis and analyzed within hold time?	pH <2, 28 days or program/project specific	Yes		Yes		
2. Was the calibration curve performed using the required number of standards?	3 standards and a blank	Yes		Yes		
3. Was the correlation coefficient acceptable?	r ≥ .995	Yes		Yes		
4. Were the ICV and ICB analyzed?	---	Yes		Yes		
5. Was the ICV result acceptable?	90 – 110 % Rec. or contract/program specific	Yes		Yes		
6. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
7. Was an LCS & MB run with each batch of samples?	One each per analytical batch or contract/program specific frequency.	Yes		Yes		
8. Was the LCS recovery acceptable?	In-house derived or contract/program specific limits.	Yes		Yes		
9. Were the MB results acceptable?	< LOD or project/ program specific (<1/2 RL for DOD-QSM).	Yes		Yes		
10. Were the CCV's analyzed at the required frequency?	Beginning, after every 10 sample, & at the end of a sequence.	Yes		Yes		
11. Were the CCB's analyzed at the required frequency?	After each CCV (unless MB analyzed after CCV)	Yes		Yes		
12. Were the CCV recoveries acceptable?	90 – 110 % Rec. or project/ program specific	Yes		Yes		
13. Were the CCB results acceptable?	< LOD or project/ program specific	Yes		Yes		

14. Were all positive results that were reported within the calibration curve?	---	Yes		Yes		
15. Was an MS and MSD analyzed at the required frequency?	1 / 20 of the same matrix or project/ program specific	Yes		Yes		
16. Were the MS and MSD recoveries acceptable?	In-house derived or project/ program specific limits	Yes		Yes		
17. Was the RPD between the MS and MSD acceptable?	In-house derived or project/ program specific limits	Yes		Yes		
18. Was a Duplicate analyzed at the required frequency?	1 per 20 of the same matrix or contract/program specific	Yes		Yes		
19. Was the RPD between the Duplicate (if valid) and the sample acceptable?	In-house derived or project/ program specific limits (QSM samples, duplicate only valid when sample result ≥5x the LOQ)	Yes		Yes		
20. Are all samples on the job lists accounted for?	---	Yes		Yes		
21. Is the standards prep log numbers noted on the analytical report?	---	Yes		Yes		
22. Were post analysis corrections addressed and/or the Audit Trail function turned on (if available)?	Correction should be initialed, dated, and reason given. Audit trail must be on (if available)	Yes		Yes		
23. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: Weston Solutions
Project: RFAAP SWMUs 49&54, Radford, VA
Sample Receipt Dates: 04/26/2022, 04/28/2022, 04/29/2022, 04/30/2022
SDG #: *169098* (Folder #'s 169098, 169156, 169199, 169227)

Twenty-four water samples were received and analyzed for a variety of parameters, including: VOCs, Dissolved Gases, Metals, pH, COD, Anions, Chlorate/Chlorite, TIC and TOC. Three Trip Blanks were included with the VOCs. The Chlorate/Chlorite analysis was subcontracted to Eurofins Eaton Analytical in South Bend, IN. The assigned sample ID number, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. A breakdown of sample receipt information can be found on the Sample Condition Report located in the last section of the data package and any exceptions are noted below. The analyses were performed following DOD QSM 5.4 requirements.

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Sample Receipt

Several of the samples that arrived at CT Labs on 04/28/2022 were past the 48-hour hold time for Nitrate upon receipt. The client instructed the lab to proceed with the analysis of these samples.

Sample Analysis and Quality Control

Volatile Analysis:

The samples were analyzed using US EPA Methods 8260C (VOC) and RSK-175 (Dissolved Gases). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8260 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1's were either not detected or did not meet identification criteria so they were reported as non-detects.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

VOC (8260C) Water Analysis

Analytical Run # 211603

All analytical results for this run met the method/project specified quality control criteria for the targeted compounds.

Dissolved Gases (RSK-175) Analysis

Analytical Run # 211667 (Methane, Ethene, Ethane)

All analytical results for this run met the method/project specified quality control criteria.

Metals Analysis:

The samples were analyzed using US EPA Methods 6010C (ICP) and 7470A (Hg). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

ICP Metals (6010C) Water Analysis

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Analytical Run # 211581

The Initial Calibration Verification Low-Level (ICVLL) standard had a recovery outside the specified limits for selenium. The samples were reanalyzed using an acceptable ICVLL standard.

The Duplicate (DUP) for sample # 1136212 was not applicable for aluminum, antimony, arsenic, beryllium, cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc because the parent sample results were less than five times the Limit of Quantitation (LOQ). A

Matrix Spike Duplicate (MSD) was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Analytical Run # 211628

Silver was detected in the Method Blank (MB) greater than the Method Detection Limit (MDL) but less than ½ the Reporting Limit (RL). The sample was reanalyzed for silver.

The DUP for sample # 1137439 was not applicable for aluminum, antimony, arsenic, beryllium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, thallium, vanadium, and zinc because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was unacceptable for aluminum and iron. The parent sample was reported and qualified with a "Y" flag for the failing elements.

The Matrix Spike (MS) and MSD for sample # 1137439 had recoveries outside the specified limits for aluminum and iron. A Serial Dilution (L) was analyzed and was not applicable for aluminum and iron because the parent sample raw results were less than 50 times the LOQ. A Post Digestion Spike (PDS) was analyzed and was acceptable. The parent sample was reported and not qualified.

ICP Sodium & Potassium (6010C) Water Analysis

Analytical Run # 211582

The DUP for sample # 1136212 was not applicable for sodium and potassium because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Analytical Run # 211629

The DUP for sample # 1137439 was not applicable for sodium and potassium because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7470A) Water Analysis

Analytical Run # 211699

The DUP for sample # 1136212 was not applicable for mercury because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was unacceptable. The parent sample was reported and qualified with a "Y" flag for mercury.

The MS and MSD for sample # 1136212 had recoveries outside the specified limits for mercury. The parent sample was reported and qualified with an "M" flag for the failing element.

Inorganic Analysis:

The samples were analyzed using US EPA Methods 9060A (TIC/TOC), 9040C (pH), 410.4 (COD) and 9056A (Anions). All samples were analyzed within the holding time unless noted below. The following summaries of quality control procedures are included:

Duplicate Analysis Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Anions (9056A) Water Analysis

Analytical Run # 211440

The MS and the MSD for sample # 1134804 had a low recovery for sulfate. The parent sample result for this compound was qualified with an "M" flag.

Analytical Run # 211534

Sample #'s 1136203 & 1136204 were received past the 48-hour hold time for the nitrate analyses. The nitrate results for these samples were qualified with an "H" flag.

The MS for sample # 1136203 had a low recovery for sulfate. The parent sample result for this compound was qualified with an "M" flag.

Analytical Run # 211592

The MS and the MSD for sample # 1136674 had a low recovery for sulfate. The parent sample result for this compound was qualified with an "M" flag.

Analytical Run # 211602

All analytical results for this run met the method/project specified quality control criteria.

COD (410.4) Water Analysis

Analytical Run # 211565

All analytical results for this run met the method/project specified quality control criteria.

Analytical Run # 211650

All analytical results for this run met the method/project specified quality control criteria.

pH (9040C) Water Analysis

Analytical Run # 211555

All analytical results for this run met the method/project specified quality control criteria.

Analytical Run # 211639

All analytical results for this run met the method/project specified quality control criteria.

TIC (9060A) Water Analysis

Analytical Run # 211530

All analytical results for this run met the method/project specified quality control criteria.

Analytical Run # 211613

All analytical results for this run met the method/project specified quality control criteria.

TOC (9060A) Water Analysis

Analytical Run # 211696

All analytical results for this run met the method/project specified quality control criteria.

Analytical Run # 211697

All analytical results for this run met the method/project specified quality control criteria.

CT LABORATORIES

delivering more than data from your environmental analyses

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

VOLATILE METHOD BLANK SUMMARY

Lab Name:	CT Laboratories	Contract:	WESTON SOLUTIONS, INC.-RADFORD AAP SWMUs 49&54
Sample ID:	1139090	SDG No.:	169098
Matrix:	LIQUID	Date Extracted:	
Date Analyzed:	05/05/2022	Time Analyzed:	08:55
Analytical Method:	EPA 8260C	Extraction Method:	NONE
Analytical Run #:	211603	Extraction Batch #:	0
		ICAL Calibration #:	W042822.

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES AND QC:

SEQUENCE	SAMPLE DESCRIPTION	SAMPLE ID	DATE/TIME ANALYZED	CALIBRATION # ID
31	BFB	1140447	05/06/2022 07:12	
32	CCV	1139733	05/06/2022 07:54	W042822.
33	CCB	1140062	05/06/2022 08:54	W042822.
34	48MW3	1136215	05/06/2022 09:24	W042822.
35	CCVF	1140124	05/06/2022 09:53	W042822.
